Safety, Culture and Risk Andrew Hopkins, 2005 Safety management in the workplace is an issue of critical importance to business managers as well as those responsible for OHS in any organisation. However, although the concepts of safety, culture, and risk have become increasing matters of concern and are often discussed, they are concepts that are not often clearly understood. This new book from Professor Andrew Hopkins focuses on these concepts and deals with the complex issues in a clear, informative style that will both inform organisations and companies and assist them to be better able to create safe environments for their employees and clients and to mitigate risk.

Content: The first three parts of the book advocate the development of risk awareness. Part 1 is a general discussion of organisational culture. Part 2 is an empirical investigation of how organisational culture affects safety using the Glenbrook train crash as a case study. Part 3 is a second case study of how organisational culture interfered with safety focussing on the F111 inquiry at Amberley Air Force Base, Queensland. Part 4 is an extended discussion of the concept of risk dealing with issues such as the assumption that risk can be objectively measured, the current view that risk is a product of likelihood and severity, the conflict between acceptable risk and as low as reasonably practical, the tendency of risk management to become risk spreading rather than risk reduction, and the confusion between risk and hazard.
