development of specifically acting drugs The famous recent method of technical information management is digital electronics Over the past few years evidence has arisen that computerized and molecular information managements have many similar and overlapping aspects For example both technology and nature use digitized information and both use small structures for the efficient handling of information Furthermore they optimize their processes in order to gain a maximum of information with a minimum of invested energy During the last two decades novel experimental techniques in biomolecular sciences have paved the way for artificial biomolecular optimization In the same time interval the progress of micro system technology has been extended from the field of digital electronics and sensing to micro liquid handling and the field of chip supported substance handling began It appears that the marriage of physical micro technology and molecular processing will be consummated soon The contact of both fields has been realized in for example DNA chips Such connections will also become relevant in additional fields in the near future Biomolecular investigations are the first to profit from these fast growing scientific and technical connections between micro systems and molecular sciences Applied Mechanics and Mechanical Engineering III Xiong Zhou,Hong Hua Tan,2012-12-13 Selected peer reviewed papers from the 2012 3rd International Conference on Applied Mechanics and Mechanical Engineering ICAMME 2012 November 14 15 2012 Macau
