Microwave Breakdown In Gases:

Microwave Breakdown in Gases Alexander D. MacDonald, 1966 1 Introduction Microwave studies Dimensional analysis 2 Electron collisions Elastic collisions Inelastic collisions Electron loss processes 3 Boltzmann equation for an ionized gas Distribution functions Higher order terms Limits of diffusion theory 4 Breakdown theory constant collision frequency Breakdown criteria Constant collision frequency 5 Breakdown theory variable collision frequency Neon Neon argon Argon krypton and xenon 6 Nonuniform and magnetic fields Nonuniform electric fields Magnetic fields 7 Experimental methods Microwave systems Vacuum systems 8 Breakdown in the atmosphere Experimental data Attachment controlled breakdown Attachment diffusion theory Breakdown near reentry vehicles Laser breakdown *Microwave Breakdown in Gases* David Alexander Beaujean, 1970 Pulsed Microwave Breakdown in Gases with a Low Degree of Preionization E. F. Dawson, S. Lederman, POLYTECHNIC INST OF BROOKLYN FARMINGDALE N Y DEPT OF AEROSPACE ENGINEERING AND APPLIED MECHANICS., 1972 The paper presents the results of experiments on microwave breakdown at an open end waveguide antenna in Air Argon Nitrogen Carbon Dioxide and Methane at pressures of 0.3 and 30 Torr The antenna was operated at 9.375 GHz under pulsed conditions at varying pulse rates Very low degrees of preionization were obtained by adjusting to very slow pulse rates The power needed to maintain the discharge was measured and from that the electric field strength was calculated This presented as a function of pressure for each gas at pulse rates ranging from 10 to 500 pulses per second At low pulse rates significantly higher power levels are needed to maintain the discharge An interesting feature is the double minima observed at low pulse rates in the data for breakdown field strength as a function of pressure for Carbon Dioxide and Methane The data was also used to calculate ionization frequency as a function of effective electric field for all give gases Where possible this data is compared with data reported by other investigators Author *Electrical Breakdown in Gases* J. A. Rees, 1973 **Breakdown of Gases in Microwave Fields on the Millimicrosecond Time Scale** William Henry Christoffers, 1955 **Microwave Theory and the Breakdown of Gases by Ruby Laser Radiation** Richard G. Tomlinson, OHIO STATE UNIV RESEARCH FOUNDATION COLUMBUS ANTENNA LAB., Ohio State University. Research Foundation, 1963 Microwave breakdown theory is extrapolated to the 6943 Angstroms ruby laser wavelength The need for breakdown criterion other than that for the critical plasma frequency sometimes used in microwave breakdown is shown A suitable criterion is developed from the solution of the electron density continuity equation including recombination loss A solution for the breakdown electric field strength or power density for the pulsed ruby laser in air as a function of pressure is obtained The effect of varying pulse duration initial electron density and characteristic diffusion length is shown A minimum power density of 10 to the 12th power watts sq cm is predicted for breakdown of air by ruby laser radiation The extent of accuracy of the results of extrapolating microwave breakdown theory to optical laser breakdown is discussed and there is speculation on the possibility of additional effects peculiar to laser breakdown Author *Advances in Microwaves* Leo

Young,2013-10-22 *Advances in Microwaves Volume 7* covers the developments in the study of microwaves The book discusses the effect of surface roughness on the propagation of the TEM mode as well as the voltage breakdown of microwave antennas The text also describes the theory and design considerations of single slotted waveguide linear arrays and the techniques and theories that led to the achievement of wide bandwidths and ultralow noise temperatures for communication applications The book will prove invaluable to microwave engineers **The Electrical Breakdown of Gases at Microwave Frequencies** P. Christophorou,James K. Olthoff,Panayota Vassiliou,2012-12-06 The book contains a broad and in depth review by leading world experts of the progress and the problems of current interest in gaseous dielectrics and their use especially as insulators in high voltage equipment and substations Recent advances in superconductivity for power transmission and in plasma technology are also included The fundamental applied and industrial research described in the book allows the electric power industry to transmit and distribute electrical energy in more efficient safe and environmentally acceptable ways **U.S. Government Research Reports** ,1964 **Fundamentals of Gaseous Ionization and Plasma Electronics** Essam Nasser,1971 *Electron-Emission Gas Discharges I / Elektronen-Emission Gasentladungen I* S.
