Parallel Algorithms For Machine Intelligence And Vision:

Parallel Algorithms for Machine Intelligence and Vision Vipin Kumar,P.S. Gopalakrishnan,Laveen N. Kanal,2012-12-06 Recent research results in the area of parallel algorithms for problem solving search natural language parsing and computer vision are brought together in this book The research reported demonstrates that substantial parallelism can be exploited in various machine intelligence and vision problems The chapter authors are prominent researchers actively involved in the study of parallel algorithms for machine intelligence and vision Extensive experimental studies are presented that will help the reader in assessing the usefulness of an approach to a specific problem Intended for students and researchers actively involved in parallel algorithms design and in machine intelligence and vision this book will serve as a valuable reference work as well as an introduction to several research directions in these areas Parallel Algorithms for Computer Vision on the Connection Machine Massachusetts Institute of Technology. Artificial Intelligence Laboratory,1986 *Parallel Algorithms for Digital Image Processing, Computer Vision and Neural Networks* Ioannis Pitas,1993-04-09 World renowned contributors present papers concerning algorithms used on the latest generation of parallel machines MIMD Details key applications running the gamut from medical imaging visualization and remote sensing to HDTV demonstrating the large computational complexity necessary to perform these tasks *System Modelling and Optimization* Jacques Henry,Jean-Pierre Yvon,2006-04-11 This conference organized jointly by UTC and INRIA is the biennial general conference of the IFIP Technical Committee 7 System Modelling and Optimization and reflects the activity of its members and working groups These proceedings contain a collection of papers 82 from the more than 400 submitted as well as the plenary lectures presented at the conference Encyclopedia of Microcomputers Allen Kent,James G. Williams,1993-11-18 The Encyclopedia of Microcomputers serves as the ideal companion reference to the popular Encyclopedia of Computer Science and Technology Now in its 10th year of publication this timely reference work details the broad spectrum of microcomputer technology including microcomputer history explains and illustrates the use of microcomputers throughout academe business government and society in general and assesses the future impact of this rapidly changing technology **Annual ACM Symposium on Parallel Algorithms and Architectures** ,1994 **Parallel Architectures and Parallel Algorithms for Integrated Vision Systems** Alok N Choudary,J H Patel,1990-09-30 Computer vision has been regarded as one of the most complex and computationally intensive problems An integrated vision system IVS is a system that uses vision algorithms from all levels of processing to perform for a high level application e g object recognition This thesis addresses several issues in parallel architectures and parallel algorithms for integrated vision systems First a model of computation for IVSs is presented The model captures computational requirements defines spatial and temporal data dependencies between tasks and shows what types of interactions may occur between tasks from different levels of processing The model is used to develop features and capabilities of a parallel architecture suitable for IVSs A multiprocessor architecture for IVSs called NETRA is presented

NETRA is highly flexible without the use of complex interconnection schemes NETRA is recursively defined hierarchical architecture whose leaf nodes consist of clusters processors connected with a programmable crossbar with a selective broadcast capability Hence it is easily scalable from small to large systems Homogeneity of NETRA permits fault tolerance and graceful degradation under faults Several refinements in the architecture over the original design are also proposed Performance of several vision algorithms when they are mapped on one cluster is presented It is shown that SIMD MIMD and systolic algorithms can be easily mapped onto processor clusters and almost linear speedups are possible An extensive analysis of inter cluster communication strategies in NETRA is presented A methodology to evaluate performance of algorithms on NETRA is described Performance analysis of parallel algorithms when mapped across clusters is presented The parameters are derived from the characteristics of the parallel algorithms which are then used to evaluate the alternative communication strategies in NETRA The effects of communication interference on the performance of algorithms are studied It is observed that if communication speeds are matched with the computation speeds almost linear speedups are possible when algorithms are mapped across clusters Finally several techniques to perform data decomposition and static and dynamic load balancing for IVS algorithms are described These techniques can be used to perform load balancing for intermediate and high level data dependent vision algorithms They are shown to perform well using them on an implementation of a motion estimation system on a hypercube multiprocessor Abstract shortened with permission of author
