Parallelism In Logic Its Potential For Performance And Program Development:

Parallelism in Logic ,1991-06-01 The potential of parallelism in logic reaches far beyond the exploitation of AND and OR parallelism usually found in attempts to parallelize PROLOG This book discusses parallelism in logic and its exploitation on parallel architectures A variety of categories of parallelism is discussed with respect to different levels of a logical formula and different ways to evaluate it As an outcome of these investigations it is shown that modularity allows structuring of logic programs and meta evaluation can be used to control the evaluation process on a parallel system This combination yields a consistent programming framework with a wide scope Finally the suitability of a specific evaluation mechanism for parallel architectures is investigated **Automated Theorem Proving in Software Engineering** Johann M.

Schumann,2013-06-29 Growing demands for the quality safety and security of software can only be satisfied by the rigorous application of formal methods during software design This book methodically investigates the potential of first order logic automated theorem provers for applications in software engineering Illustrated by complete case studies on protocol verification verification of security protocols and logic based software reuse this book provides techniques for assessing the prover's capabilities and for selecting and developing an appropriate interface architecture Parallel Processing for Artificial Intelligence 1 L.N. Kanal,H. Kitano,V. Kumar,C.B. Suttner,2014-06-28 Parallel processing for AI problems is of great current interest because of its potential for alleviating the computational demands of AI procedures The articles in this book consider parallel processing for problems in several areas of artificial intelligence image processing knowledge representation in semantic networks production rules mechanization of logic constraint satisfaction parsing of natural language data filtering and data mining The publication is divided into six sections The first addresses parallel computing for processing and understanding images The second discusses parallel processing for semantic networks which are widely used means for representing knowledge methods which enable efficient and flexible processing of semantic networks are expected to have high utility for building large scale knowledge based systems The third section explores the automatic parallel execution of production systems which are used extensively in building rule based expert systems systems containing large numbers of rules are slow to execute and can significantly benefit from automatic parallel execution The exploitation of parallelism for the mechanization of logic is dealt with in the fourth section While sequential control aspects pose problems for the parallelization of production systems logic has a purely declarative interpretation which does not demand a particular evaluation strategy In this area therefore very large search spaces provide significant potential for parallelism In particular this is true for automated theorem proving The fifth section considers the problem of constraint satisfaction which is a useful abstraction of a number of important problems in AI and other fields of computer science It also discusses the technique of consistent labeling as a preprocessing step in the constraint satisfaction problem Section VI consists of two articles each on a different important topic The first discusses parallel formulation for the Tree Adjoining Grammar TAG which is a powerful

formalism for describing natural languages The second examines the suitability of a parallel programming paradigm called Linda for solving problems in artificial intelligence Each of the areas discussed in the book holds many open problems but it is believed that parallel processing will form a key ingredient in achieving at least partial solutions It is hoped that the contributions sourced from experts around the world will inspire readers to take on these challenging areas of inquiry

Parallelization in Inference Systems Bertram Fronhöfer, Graham Wrightson, 1992-04-22 This volume contains the proceedings of an international workshop on parallelism in inference systems held in Germany in December 1990 The topic of the workshop is still rather young and several papers in the book are overview articles intended to provide a first orientation toward some of the more intensively investigated subtopics The main part of the book is a compilation of research papers on parallelization in special domains of inference such as rewriting automatic reasoning logic programming and connectionist inference Appended to the book is a collection of short project summaries received in response to a worldwide email call The book is intended primarily for researchers working on inference systems who are interested in parallelizing their systems

Mattson,Craig E Rasmussen,2009-09-28 Illustrating the effect of concurrency on programs written in familiar languages this text focuses on novel language abstractions that truly bring concurrency into the language and aid analysis and compilation tools in generating efficient correct programs It also explains the complexity involved in taking advantage of concurrency with regard to program correctness and performance The book describes the historical development of current programming languages and the common threads that exist among them It also contains several chapters on design patterns for parallel programming and includes quick reference guides to OpenMP Erlang and Cilk Ancillary materials are available on the book s website *Implementation and Performance of a Parallel Prolog Interpreter* Wei Shu,Balkrishna Ramkumar,Laxmikant Vasudeo Kalé,University of Illinois at Urbana-Champaign.
