[Parametric Optimization and Related Topics V](#) Jürgen Guddat,2000 This volume contains the proceedings of the fifth conference on Parametric Optimization and Related Topics held in Tokyo Japan from October 6 10 1997 Parametric optimization as a part of mathematical programming investigates the behaviour of solutions to optimization problems under data perturbations Properties involved such as continuity differentiability topological stability and structural stability play a fundamental role in a series of further questions that are of interest both from a practical and a theoretical point of view

Many connections with other disciplines of operations research like stochastic programming model building numerical methods and optimal control originate from these properties The presented papers all refereed are topical and original studies reflecting recent results in current directions of research in theory and applications **Parametric optimization and related topics IV** Jürgen Guddat,1997-01-01 Uncertainty-aware Integration of Control with Process Operations and Multi-parametric Programming Under Global Uncertainty Vassilis M. Charitopoulos,2020-02-05 This book introduces models and methodologies that can be employed towards making the Industry 4.0 vision a reality within the process industries and at the same time investigates the impact of uncertainties in such highly integrated settings Advances in computing power along with the widespread availability of data have led process industries to consider a new paradigm for automated and more efficient operations The book presents a theoretically proven optimal solution to multi parametric linear and mixed integer linear programs and efficient solutions to problems such as process scheduling and design under global uncertainty It also proposes a systematic framework for the uncertainty aware integration of planning scheduling and control based on the judicious coupling of reactive and proactive methods Using these developments the book demonstrates how the integration of different decision making layers and their simultaneous optimisation can enhance industrial process operations and their economic resilience in the face of uncertainty

**International Conference on Parametric Optimization and Related Topics ; 1985** ,1987 **Perturbation Theory in Mathematical Programming and Its Applications** Evgenij S. Levitin,1994-09-06 Presents the author's research of local parametric optimization in the finite dimensional case This book provides a clear and complete formulation of the main perturbation theory problems for finite dimensional optimization as well as new mathematical methods to analyze these problems Using a unified approach the author has developed a general perturbation theory for finite dimensional extremum problems Within the framework of this theory methods for studying perturbed problems in zero first and second order approximations have

been developed [Well-Posed Optimization Problems](#) Asen L. Dontchev, Tullio Zolezzi, 1993-06-14 This book presents in a unified way the mathematical theory of well posedness in optimization. The basic concepts of well posedness and the links among them are studied in particular Hadamard and Tykhonov well posedness. Abstract optimization problems as well as applications to optimal control, calculus of variations and mathematical programming are considered. Both the pure and applied side of these topics are presented. The main subject is often introduced by heuristics, particular cases and examples. Complete proofs are provided. The expected knowledge of the reader does not extend beyond textbook real and functional analysis, some topology and differential equations and basic optimization. References are provided for more advanced topics. The book is addressed to mathematicians interested in optimization and related topics and also to engineers, control theorists, economists and applied scientists who can find here a mathematical justification of practical procedures they encounter.
