Parallel Distributed Processing, Volume 2 James L. Mcclelland,David E. Rumelhart,PDP Research Group,1987-07-29 What makes people smarter than computers These volumes by a pioneering neurocomputing group suggest that the answer lies in the massively parallel architecture of the human mind They describe a new theory of cognition called connectionism that is challenging the idea of symbolic computation that has traditionally been at the center of debate in theoretical discussions about the mind The authors theory assumes the mind is composed of a great number of elementary units connected in a neural network Mental processes are interactions between these units which excite and inhibit each other in parallel rather than sequential operations In this context knowledge can no longer be thought of as stored in localized structures instead it consists of the connections between pairs of units that are distributed throughout the network Volume 1 lays the foundations of this exciting theory of parallel distributed processing while Volume 2 applies it to a number of specific issues in cognitive science and neuroscience with chapters describing models of aspects of perception memory language and thought

Parallel Distributed Processing Richard G. M. Morris,1989 In recent years there has been a substantial growth of interest in parallel distributed processing among experimental psychologists and neurobiologists Many hope that developments in formal analysis of neural networks will provide a bridge between psychological accounts of cognitive function and those at the neural level This volume examines the implications of these developments and their influence on experimental psychology and neurobiology It includes coverage of formal PDP models providing an introduction to the approach with full information on assumptions and algorithms The psychological implications of these models for research on both humans and animals is also discussed Each of the main parts is introduced by a chapter that outlines the key issues under discussion
