

Partial Differential Equations

- An equation involving partial derivatives of an unknown function of two or more independent variables
- The following are examples. Note: u depends on both x and y

$$\frac{\partial^2 u}{\partial x^2} + 2xy \frac{\partial^2 u}{\partial y^2} + u = 1 \quad \left(\frac{\partial^2 u}{\partial x^2} \right)^3 + 6 \frac{\partial^3 u}{\partial x \partial y^2} = x$$

$$\frac{\partial^2 u}{\partial x \partial y} + x \frac{\partial^2 u}{\partial y^2} + 8u = 5y \quad \frac{\partial^2 u}{\partial x^2} + xu \frac{\partial u}{\partial y} = x$$

Partial Differential Equations And Geometry:

Geometry in Partial Differential Equations Agostino Prastaro, Themistocles M. Rassias, 1994 This book emphasizes the interdisciplinary interaction in problems involving geometry and partial differential equations. It provides an attempt to follow certain threads that interconnect various approaches in the geometric applications and influence of partial differential equations. A few such approaches include Morse Palais Smale theory in global variational calculus, general methods to obtain conservation laws for PDEs, structural investigation for the understanding of the meaning of quantum geometry in PDEs, extensions to super PDEs formulated in the category of supermanifolds, of the geometrical methods just introduced for PDEs, and the harmonic theory which proved to be very important especially after the appearance of the Atiyah Singer index theorem which provides a link between geometry and topology

Nonlinear partial differential equations in differential geometry Robert Hardt, 1996 The lecture notes from a July 1992 minicourse in Park City, Utah, for graduate students and research mathematicians in differential geometry and partial differential equations. They survey the current state of such aspects as the Moser-Trudinger inequality and its applications to some problems in conformal geometry, the effect of curvature on the behavior of harmonic functions and mapping, and singularities of geometric variational problems. Partial Differential Equations for Geometric Design Hassan Ugail, 2011-08-24 The subject of Partial Differential Equations (PDEs) which first emerged in the 18th century holds an exciting and special position in the applications relating to the mathematical modelling of physical phenomena. The subject of PDEs has been developed by major names in Applied Mathematics such as Euler, Legendre, Laplace, and Fourier, and has applications to each and every physical phenomenon known to us e.g. fluid flow, elasticity, electricity, and magnetism.

weather forecasting and financial modelling This book introduces the recent developments of PDEs in the field of Geometric Design particularly for computer based design and analysis involving the geometry of physical objects Starting from the basic theory through to the discussion of practical applications the book describes how PDEs can be used in the area of Computer Aided Design and Simulation Based Design Extensive examples with real life applications of PDEs in the area of Geometric Design are discussed in the book

Nonlinear Partial Differential Equations in Geometry and Physics

Garth Baker,Alexandre Freire,2012-12-06 This volume presents the proceedings of a series of lectures hosted by the Mathematics Department of The University of Tennessee Knoxville March 22 24 1995 under the title Nonlinear Partial Differential Equations in Geometry and Physics While the relevance of partial differential equations to problems in differential geometry has been recognized since the early days of the latter subject the idea that differential equations of differential geometric origin can be useful in the formulation of physical theories is a much more recent one Perhaps the earliest emergence of systems of nonlinear partial differential equations having deep geometric and physical importance were the Einstein equations of general relativity 1915 Several basic aspects of the initial value problem for the Einstein equations such as existence regularity and stability of solutions remain prime research areas today eighty years after Einstein's work An even more recent development is the realization that structures originally the context of models in theoretical physics may turn out to have introduced in important geometric or topological applications Perhaps its emergence can be traced back to 1954 with the introduction of a non abelian version of Maxwell's equations as a model in elementary particle physics by the physicists C N Yang and R Mills The rich geometric structure of the Yang Mills equations was brought to the attention of mathematicians through work of M F Atiyah J Hitchin I
