## **Particle Accelerator Design Computer Programs:**

Particle Accelerator Design: Computer Programs John Colonias, 2012-12-02 Particle Accelerator Design Computer Programs describes some of the most important computer programs applicable to the design of particle accelerators. Computer programs that calculate magnetic and electric fields are considered along with programs that calculate orbits of particles in a magnetic and or electric field. Some representative programs useful in the design of linear accelerator type cavities are also discussed. This book is comprised of six chapters and begins with a review of two dimensional magnetostatic programs including TRIM, LINDA, NUTCRACKER, MAREC, GRACY and COILS. The University of Colorado's magnet program is also examined. The next chapter is devoted to programs capable of solving problems relating to the calculation of electrostatic fields in two dimensional geometries. The reader is also introduced to programs that perform calculations of three dimensional linear and nonlinear problems along with programs that employ matrix formalism and integration of equations of motion. The final chapter looks at programs for linear accelerator type cavities including CURE, JESSY, MESSYMESH and AZTEC. This monograph will be a useful resource for physical scientists, engineers and computer programmers.

FROM LONG DESCRIPTION      *The Design of the MAD Design Program*, 1992 The study of long term stability in particle accelerators has long been served by a group of widely circulated computer programs. The progress

in these programs has mirrored the growth and versatility in accelerator size complexity and purpose as well as evolving technologies in computing software and hardware A number of large accelerator projects during the last decade were designed with the aid of physics programs either written for or tailored for the project at hand each invariably benefiting from contributions of previous workers This paper outlines the recent history of of example of an accelerator lattice model tool kit the Methodical Accelerator Design MAD Program which has tried to knit together this collective wisdom of the accelerator community The ideas behind the software design of the program itself are traced here the accelerator physics contents and origins are thoroughly documented elsewhere These informal notes have a Brookhaven flavor in part because of early BNL efforts to generalize the ways that technical problems are organized and presented to computers Some recent BNL applications not covered in the extensive CERN documentation are also included      **Government Reports Annual Index** ,1984      **Annual Report - European Organization for Nuclear Research** European Organization for Nuclear Research,1986      *Physics Briefs* ,1990
