Brock, 2013-10-22 The Dynamics of Aerocolloidal Systems Volume 1 is concerned with the dynamical behavior of idealized aerosol particles in the light of developments in classical mechanics The idealization is based on the assumption that the solid or liquid particles suspended in a gas can be modeled as macroscopically smooth chemically inert spherical bodies Topics covered include transport processes single particles and generation and behavior of clouds Emphasis is placed on fluid dynamics from the continuum regime to the free molecule regime This book is comprised of 10 chapters and begins with an overview of definitions and classifications of aerocolloidal suspensions The next chapter deals with the characteristics of aerial dispersions as provided for in the hard smooth sphere picture The basic mechanical parameters of an aerocolloidal system is described along with certain different regimes of the idealized aerosol and various solutions of the Boltzmann equation The reader is methodically introduced to the dynamics of single particles in the continuum approximation heat and mass transfer to single particles in a continuum formation of aerosols by nucleation of supersaturated vapor and diffusion and dispersion of aerosol particles The final chapter considers the interaction between aerosol particles paying particular attention to the collision of inert spheres whose sticking probability is unity This volume will be useful to scholars practicing scientists and graduate students as well as those who would consider teaching aerosol mechanics as part of a curriculum in the atmospheric sciences or in other applied sciences including applied physical chemistry and engineering *Library Journal* ,1958 **Journal of the Air Pollution Control Association** Air Pollution Control Association, 1965 *National Agricultural Library Catalog, 1966-1970: Names* National Agricultural Library
