

# Information System Development Stages

An information system development consists of six important stages, it is system survey, needs analysis, design, implementation, testing, change and maintenance.

## i) System Survey

The SLDC phase also consists of three main points: system identification, selection, and system planning.

### i) System Identification

This process is to identify the problems facing the company and the system it has. The team will look for any opportunities that can be done to overcome this.

## ii) Selection

The selection phase will apply evaluation points to the development project to ensure the solutions are created in accordance with the company's expected targets.

## iii) System Planning

This step is the step of developing a formal plan to start working on and implementing the information system development concept that has been chosen.
