Experiments in Democracy Benjamin J. Hurlbut, 2017-01-31 Human embryo research touches upon strongly felt moral convictions and it raises such deep questions about the promise and perils of scientific progress that debate over its development has become a moral and political imperative From in vitro fertilization to embryonic stem cell research cloning and gene editing Americans have repeatedly struggled with how to define the moral status of the human embryo whether to limit its experimental uses and how to contend with sharply divided public moral perspectives on governing science Experiments in Democracy presents a history of American debates over human embryo research from the late 1960s to the present exploring their crucial role in shaping norms practices and institutions of deliberation governing the ethical challenges of modern bioscience J Benjamin Hurlbut details how scientists bioethicists policymakers and other public figures have attempted to answer a question of great consequence how should the public reason about aspects of science and technology that effect fundamental dimensions of human life Through a study of one of the most significant science policy controversies in the history of the United States Experiments in Democracy paints a portrait of the complex relationship between science and democracy and of U S society s evolving approaches to evaluating and governing science s most challenging breakthroughs

Reproduction by Design Angus McLaren, 2012-02-01 Modernity in interwar Europe frequently took the form of a preoccupation with mechanizing the natural fears and fantasies revolved around the notion that the boundaries between people and machines were collapsing Reproduction in particular became a battleground for those debating the merits of the modern world That debate continues today and to understand the history of our anxieties about modernity we can have no better guide than Angus McLaren In Reproduction by Design McLaren draws on novels plays science fiction and films of the 1920s and 30s as well as the work of biologists psychiatrists and sexologists to reveal surprisingly early debates on many of the same questions that shape the conversation today homosexuality recreational sex contraception abortion euthanasia sex change operations and in vitro

fertilization Here McLaren brings together the experience and perception of modernity with sexuality technology and ecological concerns into a cogent discussion of science s place in reproduction in British and American cultural history
