Microstructural Processes In Irradiated Materials 2000 Proceedings:

Phase Transformations in Steels Elena Pereloma, David V Edmonds, 2012-05-11 The processing microstructure property relationships in steels continue to present challenges to researchers because of the complexity of phase transformation reactions and the wide spectrum of microstructures and properties achievable This major two volume work summarises the current state of research on phase transformations in steels and its implications for the emergence of new steels with enhanced engineering properties Volume 2 reviews current research on diffusionless transformations and phase transformations in high strength steels as well as advances in modelling and analytical techniques which underpin this research Chapters in part one discuss the crystallography and kinetics of martensite transformations the morphology substructure and tempering of martensite as well as shape memory in ferrous alloys Part two summarises research on phase transformations in high strength low alloy HSLA steels transformation induced plasticity TRIP assisted multiphase steels quenched and partitioned steels advanced nanostructured bainitic steels high manganese twinning induced plasticity TWIP and maraging steels The final two parts of the book review advances in modelling and the use of advanced analytical techniques to improve our understanding of phase transformations in steels With its distinguished editors and distinguished international team of contributors the two volumes of Phase transformations in steels is a standard reference for all those researching the properties of steel and developing new steels in such areas as automotive engineering oil and gas and energy production Alongside its companion volume this major two volume work summarises the current state of research on phase transformations in steels Reviews research on diffusionless transformations and phase transformations in high strength steels Examines advances in modelling and the use of advanced analytical techniques to improve understanding of phase transformations in steels *Effects of Radiation on Materials* Martin L. Grossbeck, 2004 *Directory of Published Proceedings*, 2002 *Transport and Microstructural Phenomena in Oxide Electronics* David S. Ginley, 2001 Oxide materials are rapidly impacting a broad spectrum of optoelectronic applications from energy conservation to communications and computer memory Developing a better understanding of the relationships between transport and microstructural phenomena is critical to the continued evolution of these applications This volume reports on new materials and improved growth of films and offers a much deeper level of understanding of the key determinates affecting the electro optical performance of oxide based devices Transparent conducting oxides TCOs with a focus on p type materials are highlighted One of the most exciting results in the TCO area is the report of CuInO_2 where the material was doped n type with Sn^{4+} and p type with Ca^{2+} This is the first proven TCO system where homojunctions should be possible Ferroelectric materials are another family of materials emerging in the area of DRAM and frequency agile microwave electronics A number of papers focus on the methods of controlling the interfacial properties of ferroelectric materials such as BaSrTiO_3 on a variety of substrates A number of groups are approaching atomic level control of interfaces allowing for the deposition of high quality materials on substrates

as diverse as Si and MgO Embedded strain from the growth process for ferroelectric materials and other oxide systems is also demonstrated to be a critical determinate of the film And a new model for ferroelectric materials indicates that a nanopolar reorientation transition may be responsible for the marked increase in dielectric tuning for nonstressed films Topics include transparent conducting oxides transport and microstructural phenomena in oxide electronics oxide based devices ferroelectric materials and oxide thin film growth Dynamics in Small Confining Systems V: Volume 651 J.
