## Microstructures Of Surfaces Using Interferometry:

**Microstructures of Surfaces, Using Interferometry** Samuel Tolansky,1968      *Microstructures of Surfaces, Using Interferometry* Samuel Tolansky,1968      **Interferometry by Holography** Y.I. Ostrovsky, M.M. Butusov, G.V. Ostrovskaya, 2013-04-17 This book is an introduction to holographic interferometry a field of holography having a great number of important and practically useful applications. It is intended for specialists working in the field of optics and holography and also for students of the relevant specialities. At present a greater and greater number of mechanical engineers, turbine designers, testers of diverse equipment, biologists, crystallographers and so on have to do with holographic interferometry. To allow these specialists who are comparatively far from optics to master the subject too the main content of the book is preceded by an introductory chapter treating the fundamental concepts of the interference of light, optical interferometry, holography and holographic interferometry. The following chapters deal with the fundamentals of the theory of holographic interferometry and of experimental equipment. The authors have set themselves the task of sharing their more than ten years of experience of work in the field of holographic interferometry with their readers. In this connection the questions which they dealt with directly are considered in somewhat greater detail as a rule than those with which they have become acquainted only from publications on the subject. A sufficiently detailed although far from complete bibliography gives any interested reader an opportunity to improve his knowledge of this field.      **Interferometry as a Measuring Tool** James Dyson, 1970      *Design, Test, and Microfabrication of MEMS and MOEMS*, 1999      *Interferometry in Speckle Light* P. Jacquot, J.-M. Fournier, 2012-02-02 These proceedings reflect the work presented at the conference Interferometry in Speckle Light Theory and Applications held at the Ecole Polytechnique Federale de Lausanne EPFL the Swiss Federal Institute of Technology in Lausanne Switzerland. The event took place from September 25 to September 28 2000. Thanks to the diligence of the authors this book has been published just in time for the conference. Writing this preface in July in anticipation of the conference we have tried to envisage how this book will benefit the quality of discourse between authors and attendees. Interferometry in Speckle Light Theory and Applications results from a bottom up approach and is original in several ways. This conference is not part of a series on the contrary it is a single event. The idea of gathering scientists and engineers for a general discussion on the theory and the practice of interferometry involving rough non optically polished objects was in the air. An opportunity of this sort was not provided by any of the conferences scheduled when the present one was conceived. For this reason it was easy to convince a small number of renowned researchers all of them active in the field of holographic and speckle interferometry to organize a conference. To be specific they are the people listed below as members of the scientific and local committees. At the same time a particular circumstance namely the retirement of Professor L Pflug helped to determine the location of the meeting.      Microstructure and Microtribology of Polymer Surfaces Vladimir Vasil'evich Tikhonuk, 2000. Presents 30 of the 62 papers delivered at an August 1998 international symposium in Boston on the

tribology of polymeric materials at both the macroscopic and microscopic scales. They look at some problems that have arisen as the equipment and experimental techniques for microscopic analysis have outdistanced the ability of scientists to model and interpret the results. The overall themes are contact mechanics of polymeric materials, micromechanics and microtribology, surface microstructures of various polymers and industrial applications. Among the specific topics are the role of interfacial slippage in adhesive release, the experimental study of the friction regimes on viscoelastic materials, sparse coatings by the disperse adsorption of cylindrical brushes and the effect of surface texture on the friction of automotive interior plastics.
