The Structure of Thinking Laura E. Wood, 2013-06-17 Analytic philosophers and cognitive scientists have long argued that the mind is a computer like syntactical engine and that all human mental capacities can be described as digital computational processes This book presents an alternative naturalistic view of human thinking arguing that computers are merely sophisticated machines Computers are only simulating thought when they crunch symbols not thinking Human cognition semantics de re reference indexicals meaning and causation are all rooted in human experience and life Without life and experience these elements of discourse and knowledge refer to nothing And without these elements of discourse and knowledge syntax is vacant structure not thinking

*Logical Form and Language* Gerhard Preyer, Georg Peter, 2002 One of the central issues of analytic philosophy and especially the theory of language is the concept of logical form As typically

understood this concept covers investigations into universal logical features underlying languages. However, from Frege and Russell onwards, logical form analysts were no longer confined to such narrow linguistic perspectives. For them, investigating the logical form of language took the wider philosophical perspective of trying to understand language as our principal means for representing the world. From Russell's theory of definite descriptions to Davidson's truth-theoretical analyses of adverbial modification, citation and reported speech, to lay open the logical structures underlying language is seen as a way of revealing the structure and features of the thereby represented world. Seventeen specially written essays by eminent philosophers and linguists appear for the first time in this anthology. *Logical Form and Language* brings together exciting new contributions from diverse points of view which illuminate the lively current debate about this topic.

**Truth and its Deformities** Peter A. French, Howard K. Wettstein, 2009-03-23. *Truth and Its Deformities* is the 32nd volume in the Midwest Studies in Philosophy series. It contains major new contributions on a range of topics related to the general theme of the volume by some of the most important philosophers writing on truth in recent years.

*Meaning and Method* George Boolos, 1990-10-26. This volume is a report on the state of philosophy in a number of significant areas.

Language and Reality from a Naturalistic Perspective Andrea Bianchi, 2020-10-19. This book celebrates the many important contributions to philosophy by one of the leading philosophers in the analytic field, Michael Devitt. It collects seventeen original essays by renowned philosophers from all over the world. They all develop themes from Devitt's work, thus discussing many fundamental issues in philosophy of linguistics, theory of reference, theory of meaning, methodology and metaphysics. In a long final chapter, Devitt himself replies to the contributors. In so doing, he further elaborates his views on various of these issues, for example, defending his claim in opposition to Chomskyan orthodoxy that languages are external rather than internal, his well-known causal theory of reference, his shocking idea that meanings can be causal, non-descriptive modes of presentation, his methodological naturalism, his commitment to scientific realism, and his version of biological essentialism. The volume will appeal to all scholars and students interested in contemporary theoretical analytic philosophy and will be a must-read for any serious researcher in philosophy of language. It provides a deep insight into the work of one of the most important living philosophers and will help readers to better understand language and reality from a naturalistic perspective.

*The Philosophy of the Human Sciences* Peter A. French, Theodore Edward Uehling, Howard K. Wettstein, 1990.
