Migrant Birds In The Neotropics:

Migrant Birds in the Neotropics Allen Keast, Eugene S. Morton, 1980 **Ecology and Management of Neotropical Migratory Birds** Thomas E. Martin, Deborah M. Finch, 1995-10-19 The apparent decline in numbers among many species of migratory songbirds is a timely subject in conservation biology particularly for ornithologists ecologists and wildlife managers This book is an attempt to discuss the problem in full scope It presents an ambitious comprehensive assessment of the current status of neotropical migratory birds in the U S and the methods and strategies used to conserve migrant populations Each chapter is an essay reviewing and assessing the trend from a different viewpoint all written by leaders in the fields of ornithology conservation and population biology **Migrant Birds in the Neotropics** Allen Keast, Eugene S. Morton, 1980 **Migrant Birds in the Neotropics: Ecology, Behavior, Distribution, and Conservation** Allen Keast, Eugene S. Morton, 1980 *Neotropical Migratory Birds* Richard DeGraaf, John Rappole, 2019-06-07 Thrushes warblers vireos and tanagers are probably the most familiar of the Neotropical migrants birds that breed in the United States and Canada then journey to spend the winter in the Caribbean Mexico or southward But this extraordinary group actually comprises a large number of diverse species including waterfowl shorebirds terns hawks flycatchers and hummingbirds In their compendious review of information on these birds Richard M DeGraaf and John H Rappole illuminate the need for a thorough understanding of the ecology of each species one that extends throughout the entire life cycle The authors argue convincingly that conservation efforts must be based on such an understanding and carried out across a species range not limited to the breeding grounds This book is the first to summarize in one volume much needed practical data about the distribution and breeding habitat requirements of migratory birds in North and South America The body of the book consists of natural history accounts of more than 350 species of Neotropical migrants including a brief description of each bird s range status habitats on breeding grounds nest site and wintering areas The authors provide a complete range map of each species distribution in the Western Hemisphere as well as notes on the distribution basic data that until recently have largely been unavailable in usable form to ornithologists and land and resource managers An appendix lists species that are increasing or decreasing at significant rates in various physiographic regions of North America *Status and Management of Neotropical Migratory Birds* Deborah M. Finch, Peter W. Stangel, 1993 *Neotropical Migratory Birds* Richard M. DeGraaf, John H. Rappole, 1995 Thrushes warblers vireos and tanagers are probably the most familiar of the Neotropical migrants birds that breed in the United States and Canada then journey to spend the winter in the Caribbean Mexico or southward But this extraordinary group actually comprises a large number of diverse species including waterfowl shorebirds terns hawks flycatchers and hummingbirds In their compendious review of information on these birds Richard M DeGraaf and John H Rappole illuminate the need for a thorough understanding of the ecology of each species one that extends throughout the entire life cycle The authors argue convincingly that conservation efforts must be based on such an

understanding and carried out across a species range not limited to the breeding grounds This book is the first to summarize in one volume much needed practical data about the distribution and breeding habitat requirements of migratory birds in North and South America The body of the book consists of natural history accounts of more than 350 species of Neotropical migrants including a brief description of each bird s range status habitats on breeding grounds nest site and wintering areas The authors provide a complete range map of each species distribution in the Western Hemisphere as well as notes on the distribution basic data that until recently have largely been unavailable in usable form to ornithologists and land and resource managers An appendix lists species that are increasing or decreasing at significant rates in various physiographic regions of North America

Birds of Two Worlds Russell Greenberg, Peter P. Marra, 2005-05-02 For centuries biologists have tried to understand the underpinnings of avian migration where birds go and why why some migrate and some do not how they adapt to a changing environment and how migratory systems evolve Twenty five years ago the answers to many of these questions were addressed by a collection of migration experts in Keast and Morton s classic work *Migrant Birds in the Neotropics* In 1992 Hagan and Johnston published a follow up book *Ecology and Conservation of Neotropical Migrant Landbirds* In *Birds of Two Worlds* Russell Greenberg and Peter Marra bring together the world s experts on avian migration to discuss its ecology and evolution The contributors move the discussion of migration to a global stage looking at all avian migration systems and delving deeper into the evolutionary foundations of migratory behavior Readers interested in the biology behavior ecology and evolution of birds have waited a decade to see a worthy successor to the earlier classics *Birds of Two Worlds* will complete the trilogy and become indispensable for ornithologists evolutionary biologists serious birders and public and academic libraries

Ecology and Conservation of Neotropical Migrant Landbirds Manomet Bird Observatory (Mass.), 1992 For more than a decade ornithologists have suspected that migrant landbird populations in the United States and Canada are declining Fragmented forests in the northern breeding grounds and the loss of habitats in tropical wintering zones have been suggested as two major factors in the population declines This is the first technical volume to focus exclusively on the question of northern hemispheric migratory landbird declines and their conservation More than one hundred leading scholars working in the Americas and the Caribbean report on the problems facing these birds and suggest strategies for research and conservation The book details the basic ecology of many Neotropical migrant landbirds in both

temperate and tropical regions Individual reports each with a Spanish abstract probe the reasons for population changes discuss species behavior during summer and winter months and gauge the impact of environmental events on landbirds This book arose out of a 1989 symposium at Woods Hole Massachusetts hosted by the Manomet Bird Observatory a meeting widely credited for bringing Neotropical migrant landbird conservation to the forefront of attention *The Ecology of Migrant Birds* John H. Rappole, 1995 Habitat Resource Use Migrants as Members of Tropical Communities Migration Migrant Evolution Old World Versus New World Migration Systems Migrant Population Change *Conservation of Neotropical Migratory Birds in Mexico* Marcia H. Wilson, Steven A. Sader, 1995 **Where Have All the Birds Gone?** John

Terborgh, 1989-12-21 Things are going wrong with our environment writes John Terborgh even the parts of it that are nominally protected If we wait until all the answers are in we may find ourselves in a much worse predicament than if we had taken notice of the problem earlier By waiting one risks being too late on the other hand there can be no such thing as being too early Terborgh's warnings are essential reading for all who care about migratory birds and our natural environment Why are tropical migrant species disappearing from our forests Can we save the birds that are left Terborgh takes a more comprehensive view of migratory birds than is usual by asking how they spend their lives during the half year they reside in the tropics By scrutinizing ill planned urban and suburban development in the United States and the tropical deforestation of Central and South America he summarizes our knowledge of the subtle combination of circumstances that is devastating our bird populations This work is pervaded by Terborgh's love for the thrushes warblers vireos cuckoos flycatchers and tanagers that inhabited his family's woodland acreage while he was growing up birds that no longer live there in spite of the preservation of those same woods as part of a county park The book is a tour of topics as varied as ecological monitoring the plight of the Chesapeake wetlands the survival struggle of Central American subsistence farmers and the management of commercial forests **Key Areas for Threatened Birds in the Neotropics** David C. Wege, Adrian J. Long, 1995-10-17

Approximately 3 600 bird species occur in the 21 countries of mainland Central and South America of which 290 are listed as threatened Taking a country by country site based approach this book documents the 596 most important areas for the conservation of these threatened birds Introductory chapters define Key Areas and the distribution of threatened species describe habitats threats and conservation and identify the gaps in our knowledge of Neotropical birds *Migratory Bird (neotropical and Shorebirds) Management Plan for the Barataria and Terrebonne Basins of Louisiana*, 1996

Fragmentation of Habitats Used by Neotropical Migratory Birds in Southern Appalachians and the Neotropics, 1993 Recent declines in North American breeding populations have sparked great concern over the effects of habitat fragmentation Neotropical migrant birds use and are influenced by two biomes during a single life span Yet assessment of the relative importance of changes in tropical wintering areas versus temperate breeding areas is complicated by regional variation in rates and extent of habitat change Landscape level measurements of forest fragmentation derived from remotely

sensed data provide a means to compare the patterns of habitat modification on the wintering and breeding grounds of migrant birds. This study quantifies patterns of forest fragmentation in the Southern Appalachian Mountains and tropical Amazon and relates these patterns to the resource needs of neotropical migrant birds. Study sites were selected from remotely sensed images to represent a range of forest fragmentation: highly fragmented landscape to continuous forest.
