Migration And Economic Development Population Economics:

Migration and Economic Development Klaus F. Zimmermann, 1992-07-10 Klaus F Zimmermann Migration has become a topic of substantial interest in Europe in recent years Part of this interest is driven by the important political changes in East Europe and the potential threat of large East West migration waves However due to the large differences in economic development a substantial migration pressure is also expected from the South of Europe as of other parts of the world The global migration potential towards the higher developed areas has reached about 80 to 100 million people Thereof about 60 million would like to move permanently 20 million temporarily and about 15 million are refugees and asylum seekers and approximately 30 million are illegals The book consists of eight papers which are allocated to five parts Theoretical Models Part I Performance of Migrants Part II Migration Within Developing Countries Part IV and Immigration Policy Part V Each paper begins with a brief summary of its content Part I Theoretical Models contains first A Microeconomic Zlmm r mann VI Model of Migration by Siegfried Berninghaus and Hans GUnther Seifert Vogt They study migration decision making under incomplete information and apply it to empirically relevant phenomena The second paper by Gerhard Schmitt Rink Migration and International Factor Price Equalization demonstrates that international migration tends to equalize national factor prices and factor shares even in the absence of international trade In Part II Performance of Migrants Lucie Merkle and Klaus F *Population Economics* Assaf Razin, Efraim Sadka, 1995 From Malthus to Becker the economic approach to population growth and its interactions with the surrounding economic environment has undergone a major transformation Population Economics elucidates the theory behind this shift and the consequences for economic policy Razin and Sadka systematically examine the microeconomic implications of people s decisions about how many children to have and how to provide for them on population trends and social issues of population policy The authors analyze how these decisions affect labor supply consumption savings and bequests investments in human capital and economic growth along with related new issues such as migration and income redistribution across generations in an integrated microeconomic framework Population Economics is a thoroughly modern treatment of population economics as a field in public economics It integrates and extends Marc Nerlove s Household and Economy Welfare Economics of Endogenous Fertility as well as work written jointly with colleagues that has appeared in various journals and other publications *International Handbook on Migration and Economic Development* Robert E.B. Lucas, 2014-12-31 This Handbook summarizes the state of thinking and presents new evidence on various links between international migration and economic development with particular reference to lower income countries The connections between trade aid and migration are **International Migration, Economic Development & Policy** Maurice Schiff, aglar zden, 2007-06-26 International migration has become a central element of international relations and global integration due to its rapidly increasing economic social and cultural impact in both source and destination countries This book provides new evidence on the impact of migration and remittances on several

development indicators including innovative thinking about the nexus between migration and birth rates. In addition the book identifies the effect of host country policies on migration flows examines the determinants of return and repeat migration and explores the degree of success of return migrants upon return to their country of origin *Migration and Economic Growth in the United States* Michael J. Greenwood, 2014-05-10 *Migration and Economic Growth in the United States* National Regional and Metropolitan Perspectives describes the post World War II behavior of selected variables that explains the evolution of urban size and composition in the United States. This book is organized into nine chapters. Chapter 1 provides a brief historical overview of the urbanization process in the United States. In Chapters 2 and 3 certain national forces that shape the spatial distribution of population and economic activity during the postwar period are deliberated. Chapters 4 and 5 elaborate the behavior of the central cities and suburban rings of 62 major metropolitan areas. A model of metropolitan growth is dealt with in Chapter 6 followed by an evaluation of estimates of the model from 1950 to 1970 in Chapter 7. Chapter 8 covers a model of intrametropolitan location of employment housing and labor force. The last chapter elaborates the employment policy implications of population redistribution in the United States. This publication is beneficial to economists and specialists concerned with migration and economic growth in the United States *Urbanization and Migration as Factors Affecting Global Economic Development* Ushakov, Denis, 2014-11-30 *International migration and urbanization* are potential solutions for stabilizing the global economy and bolstering local and regional economies. However if unregulated they can also put market stability at risk and cause new social problems in both developed and developing countries. *Urbanization and Migration as Factors Affecting Global Economic Development* takes a close look at the impact of urbanization and international migration on the global economy. Studying the dynamics of these two phenomena in countries across the world as well as the varying successes of regional regulations this publication is a valuable resource for academics interested in further research in urbanization migration and global economic efficiency as well as policymakers involved in regulating international migration and urbanization *Economics and Demography (Routledge Revivals)* Ian Bowen, 2012-11-12 First published in 1976 *Economics and Demography* discusses how the world population doubled in the thirty years prior to its publication and considers the economic implications of this demographic transformation. Professor Bowen with many years experience of research into the economic and statistical aspects of population and world development provides a survey of the population of the world and of how political economists have explained population growth. The author's survey looks first at the mechanisms of growth fertility mortality and migration followed by an account of theories of growth from Adam Smith to the present day. Professor Bowen a former fellow of All Souls College Oxford who taught at universities in England America Australia and Asia writes from the point of view of a political economist rather than a demographer and *Economics and Demography* is of particular value to students of development development economics and demography within departments of economics economic history and geography [A Macroeconomic-demographic](#)

,1993 **The Unsettled Relationship** Demetrios G. Papademetriou,Philip L. Martin,1991-03-30 More than twenty million migrant workers send 40 billion to their countries of origin each year making labor second only to oil as the most important commodity traded internationally The essays contained here deal with this unsettled sociopolitical issue international labor migration and its relationship to economic development seeking to determine the effects of recruitment remittances and return migration on labor exporting countries Many analysts sending country governments employers and migrant workers feel that countries with unemployed workers should if possible export them to countries with labor shortages Remittances from migrants and returning workers who were trained abroad should stimulate economic growth enough to reduce unemployment and pressures to emigrate It was projected that within a decade or less labor importing countries would emerge from the labor shortage phase of their development However migrant workers have become a structural feature of the economies in Western Europe the Middle East South Africa and the United States emigration does not promote development in the sending countries This collection of twelve chapters by experts in the field examines the conceptual and theoretical issues in international labor migration and looks at the relationship between migration and development in Africa between Mediterranean countries and Europe between Asian labor exporters and Middle Eastern importers and the effects of emigration on Latin America and the Caribbean In addition to comprehensive introductory and concluding sections Conceptual and Theoretical Issues in International Labor Migration and The Unsettled Relationship between Migration and Development the volume is divided into four additional sections that scrutinize labor migration and development in Africa Greece and Turkey Asian countries and Latin America Mexico and the Caribbean The book's recurring theme states that there is no iron law of migration induced development recruitment remittances and returns do not automatically generate stay at home development This first thorough and comparative treatment with its focus on the population social policy labor market language and foreign policy implications of recent and present policies will be invaluable for courses on refugees and migrants in sociology and comparative public policy Research libraries and international assistance organizations will find it an indispensable resource Economic Development, Population Policy, and Demographic Transition in the Republic of Korea Robert Repetto,Tai Hwan Kwon,Son-Ung Kim,Dae Young Kim,John E. Sloboda,2020-03-17 Since the early 1960s the Korean experience represents a fairly extreme example of 1 development strategy the open export led labor intensive model Since the onset of rapid economic growth in the early 1960s triggered by a set of liberalizing economic policy reforms manufactured exports have expanded at an average annual rate of over 25% and have provided much of the impetus for the

growth of industry and industrial employment Expanded domestic markets for intermediates and capital equipment have brought substantial import substituting industrial growth and a relative abundance of domestic and international finance Another aspect of Korea's experience which makes it a valuable case study is the fact that the country entered this period of development with an exceptionally equally distributed stock of human and physical wealth The Korean case represents close to an extreme in 2 dimensions rapid open export led labor intensive growth combined with markedly egalitarian initial social and economic structures For the student of demographic transition Korea's experience is noteworthy because of the rapidity of change The crude birthrate declined 40% between 1960-75 The mechanisms and socioeconomic determinants of this transition are questions of substantial interest to those concerned with population problems Kwon illuminates the historical antecedents to this period of rapid demographic change It was the drastic upheaval of Korean society during the wartime period that set the stage for fertility transition The dislocations and destruction of the Korean War completed the process The war greatly weakened the family structure of Korean society and put an end to early marriage In addition to affecting family values and birth control practice in Korea it directly interfered with family formation and fertility Repetto explores the channels of influence through which the economic development of Korea affected the demographic transition Kim demonstrates that the policies with the most pronounced effect of population growth and distribution have been implicit and indirect Kim and Sloboda sheds light on the economic forces behind migration through the analysis of new data on the economic characteristics of migrants [Global food policy report 2023: Rethinking food crisis responses](#) International Food Policy Research Institute (IFPRI), 2023-04-13 This decade has been marked by multiple often overlapping crises The COVID-19 pandemic natural disasters and the ongoing war in Ukraine have all threatened the fabric of our global food systems But opportunities can be found amid crises and the world's food systems have demonstrated surprising resilience With new evidence on what works now is the time to rethink how we address food crises Better prediction preparation and resilience building can make future crises less common and less devastating and improved responses can contribute to greater food security better nutrition and sustainable livelihoods [Principles of Economics](#) Edwin Robert Anderson Seligman, 1908
