High-Performance Parallel Database Processing and Grid Databases David Taniar,Clement H. C. Leung,Wenny Rahayu,Sushant Goel,2008-09-17 The latest techniques and principles of parallel and grid database processing The growth in grid databases coupled with the utility of parallel query processing presents an important opportunity to understand and utilize high performance parallel database processing within a major database management system DBMS This important new book provides readers with a fundamental understanding of parallelism in data intensive applications and demonstrates how to develop faster capabilities to support them It presents a balanced treatment of the theoretical and practical aspects of high performance databases to demonstrate how parallel query is executed in a DBMS including concepts algorithms analytical models and grid transactions High Performance Parallel Database Processing and Grid Databases serves as a valuable resource for researchers working in parallel databases and for practitioners interested in building a high performance database It is also a much needed self contained textbook for database courses at the advanced undergraduate and graduate levels

Mining Very Large Databases with Parallel Processing Alex A. Freitas,Simon H. Lavington,1997-11-30 Mining Very Large Databases with Parallel Processing addresses the problem of large scale data mining It is an interdisciplinary text describing advances in the integration of three computer science areas namely intelligent machine learning based data mining techniques relational databases and parallel processing The basic idea is to use concepts and techniques of the latter two areas particularly parallel processing to speed up and scale up data mining algorithms The book is divided into three parts The first part presents a comprehensive review of intelligent data mining techniques such as rule induction instance based learning neural networks and genetic algorithms Likewise the second part

presents a comprehensive review of parallel processing and parallel databases Each of these parts includes an overview of commercially available state of the art tools The third part deals with the application of parallel processing to data mining The emphasis is on finding generic cost effective solutions for realistic data volumes Two parallel computational environments are discussed the first excluding the use of commercial strength DBMS and the second using parallel DBMS servers It is assumed that the reader has a knowledge roughly equivalent to a first degree BSc in accurate sciences so that he is reasonably familiar with basic concepts of statistics and computer science The primary audience for Mining Very Large Databases with Parallel Processing is industry data miners and practitioners in general who would like to apply intelligent data mining techniques to large amounts of data The book will also be of interest to academic researchers and postgraduate students particularly database researchers interested in advanced intelligent database applications and artificial intelligence researchers interested in industrial real world applications of machine learning

Advances in Database Technology - EDBT 2004 Elisa Bertino, Stavros Christodoulakis, Dimitris Plexousakis, Christophides Vassilis, Manolis Koubarakis, Klemens Böhm, Elena Ferrari, 2004-02-12

The 9th International Conference on Extending Database Technology (EDBT 2004) was held in Heraklion, Crete, Greece during March 14-18, 2004. The EDBT series of conferences is an established and prestigious forum for the exchange of the latest research results in data management. Held every two years in an attractive European location, the conference provides unique opportunities for database researchers, practitioners, developers and users to explore new ideas, techniques and tools and to exchange experiences. The previous events were held in Venice, Vienna, Cambridge, Avignon, Valencia, Konstanz and Prague. EDBT 2004 had the theme "new challenges for database technology" with the goal of encouraging researchers to take a greater interest in the current exciting technological and application advancements and to devise and address new research and development directions for database technology. From its early days, database technology has been challenged and advanced by new uses and applications and it continues to evolve along with application requirements and hardware advances. Today's DBMS technology faces yet several new challenges. Technological trends and new computation paradigms and applications such as pervasive and ubiquitous computing, grid computing, bioinformatics, trust management, virtual communities and digital asset management, to name just a few, require database technology to be deployed in a variety of environments and for a number of different purposes. Such an extensive deployment will also require trustworthy, resilient database systems as well as easy to manage and exible ones to which we can entrust our data in whatever form they are.

Strategic Database Technology Alan R. Simon, 1995

Noted consultant Alan Simon's 11th book explores the potential of current and emerging database technologies. Technically serious but not technically detailed, this book is designed to give information managers and others an overview of the trends and technologies for use in the years ahead so that they can be incorporated into the manager's plans today.

Distributed Database Systems Chhanda Ray, Ray, 2009

Distributed Database Systems discusses the recent and emerging technologies in the field of distributed database technology. The material is up to date, highly readable and illustrated with numerous practical examples. The mainstream areas of distributed database technology such as distributed database design, distributed DBMS architectures, distributed transaction management, distributed concurrency control, deadlock handling in distributed systems, distributed recovery management, distributed query processing and optimization, data security and catalog management have been covered in detail. The popular distributed database systems SDD 1 and R have also been included.

Proceedings of the International Conference on Parallel and Distributed Processing Techniques and Applications Hamid R. Arabnia,1998 **Integrity Control in Parallel Database Systems** Paul Grefen,1992-10 The work described in this thesis takes a new approach to high performance control of data quality in databases by integrally combining the ideas of integrity control subsystems and parallel data processing Integrity control subsystems deal with requirements regarding the quality of data in databases but require high performance processing capabilities Parallel data processing techniques are used to obtain high performance data processing both to accomodate the requirements of the integrity control subsystems and to deal with the general high demands on database management systems This combination leads to the notion of integrity control in parallel database systems This notion is applied in the Transaction Modification approach and prototyped on the PRISMA highly parallel prototype database machine Database and Expert Systems Applications Norman Revell,A Min Tjoa,1995-08-23 This book is about Drosophila retrotransposons which were the first eukaryotic mobile DNA elements discovered at the molecular level Both passive and active inhabitants of the eukaryotic genome they can influence its stable components and at the same time be subject to various types of cellular control The book covers different aspects of their structure and expression replication and transpositions their interaction with the host cell their role as important factors of genetic instability and essential contributors to the structure and evolution of the Drosophila genome **Histogram-based Estimation Techniques in Database Systems** Viswanath Poosala,1997
