Parallel And Distributed Computing A Survey Of Models Paradigms And Approaches:

Parallel and Distributed Computing Claudia Leopold, 2001 An all inclusive survey of the fundamentals of parallel and distributed computing The use of parallel and distributed computing has increased dramatically over the past few years giving rise to a variety of projects implementations and buzzwords surrounding the subject Although the areas of parallel and distributed computing have traditionally evolved separately these models have overlapping goals and characteristics Parallel and Distributed Computing surveys the models and paradigms in this converging area of parallel and distributed computing and considers the diverse approaches within a common text Covering a comprehensive set of models and paradigms the material also skims lightly over more specific details and serves as both an introduction and a survey Novice readers will be able to quickly grasp a balanced overview with the review of central concepts problems and ideas while the more experienced researcher will appreciate the specific comparisons between models the coherency of the parallel and distributed computing field and the discussion of less well known proposals Other topics covered include Data parallelism Shared memory programming Message passing Client server computing Code mobility Coordination object oriented high level and abstract models And much more Parallel and Distributed Computing is a perfect tool for students and can be used as a foundation for parallel and distributed computing courses Application developers will find this book helpful to get an overview before choosing a particular programming style to study in depth and researchers and programmers will appreciate the wealth of information concerning the various areas of parallel and distributed computing

Tools and Environments for Parallel and Distributed Computing Salim Hariri, Manish Parashar, 2004-01-28 Publisher Description

Similarity Search Pavel Zezula, Giuseppe Amato, Vlastislav Dohnal, Michal

Batko,2006-06-07 The area of similarity searching is a very hot topic for both research and commercial applications Current data processing applications use data with considerably less structure and much less precise queries than traditional database systems Examples are multimedia data like images or videos that offer query by example search product catalogs that provide users with preference based search scientific data records from observations or experimental analyses such as biochemical and medical data or XML documents that come from heterogeneous data sources on the Web or in intranets and thus does not exhibit a global schema Such data can neither be ordered in a canonical manner nor meaningfully searched by precise database queries that would return exact matches This novel situation is what has given rise to similarity searching also referred to as content based or similarity retrieval The most general approach to similarity search still allowing construction of index structures is modeled in metric space In this book Prof Zezula and his co authors provide the first monograph on this topic describing its theoretical background as well as the practical search tools of this innovative technology

Solutions to Parallel and Distributed Computing Problems Albert Y. Zomaya, Fikret Ercal, Stephan Olariu,2000-11-14 Solving problems in parallel and distributed computing through the use of bioinspired techniques Recent years have seen a surge of interest in computational methods patterned after natural phenomena with biologically inspired techniques such as fuzzy logic neural networks simulated annealing genetic algorithms or evolutionary computer models increasingly being harnessed for problem solving in parallel and distributed computing Solutions to Parallel and Distributed Computing Problems presents a comprehensive review of the state of the art in the field providing researchers and practitioners with critical information on the use of bio inspired techniques for improving software and hardware design in high performance computing Through contributions from top leaders in the field this important book brings together current research results exploring some of the most intriguing and cutting edge topics from the world of biocomputing including Parallel and distributed computing of cellular automata and evolutionary algorithms How the speedup of bio inspired algorithms will help their applicability in a wide range of problems Solving problems in parallel simulation through such techniques as simulated annealing algorithms and genetic algorithms Techniques for solving scheduling and load balancing problems in parallel and distributed computers Applying neural networks for problem solving in wireless communication systems

Szuba,2001-03-07 Introducing a groundbreaking approach to understanding measuring and applying Collective Intelligence Does Collective Intelligence CI exist and if so how can it be characterized quantified and harnessed Questions such as these continue to be hotly debated within both the scientific and philosophical communities Yet few researchers working in the fields of artificial intelligence or distributed computing doubt CI s enormous potential value to the future of computing Unfortunately for lack of a rigorous formal theory of Collective Intelligence most attempts to analyze CI systems have been disappointing at best In Computational Collective Intelligence Professor Tadeusz Szuba does much to rectify that situation by developing for the first time both a formal definition of CI and practical guidelines for its assessment and applications Working from the ground up Dr Szuba begins with a stimulating and insightful discussion of the types of intelligence including individual artificial and collective into which he brings ideas from AI information theory and distributed computing as well as psychology sociology

animal behavior cognitive science and other relevant disciplines He tackles the problem of computational models for simulating and measuring CI He explores all theoretically feasible models of CI computations and presents a groundbreaking nondeterministic approach using the Random PROLOG Processor RPP as a CI modeling and evaluation tool He then introduces the Collective Intelligence Quotient IQS and develops clear cut guidelines for measuring it In the final chapters he lays the foundation for a dynamic new discipline Collective Intelligence Engineering CIE and considers its potential applications as an organizational restructuring tool **UPC** Tarek El-Ghazawi,2005-06-08 This is the first book devoted to UPC and the authors are among the developers Covering background material on parallel architectures and algorithms this book is an invaluable reference for UPC users and applications developers Includes UPC programming case studies
