Parallel Processing Algorithms For Gis:

Parallel Processing Algorithms For GIS Richard Healey, Steve Dowers, Bruce Gittings, Mike J Mineter, 1997-11-30 Over the last fifteen years GIS has become a fully fledged technology deployed across a range of application areas. However, although computer advances in performance appear to continue unhindered, data volumes and the growing sophistication of analysis procedures mean that performance will increasingly become a serious concern in GIS. Parallel computing offers a potential solution. However, traditional algorithms may not run effectively in a parallel environment, so utilization of parallel technology is not entirely straightforward. This groundbreaking book examines some of the current strategies facing scientists and engineers at this crucial interface of parallel computing and GIS. The book begins with an introduction to the concepts, terminology, and techniques of parallel processing, with particular reference to GIS. High-level programming paradigms and software engineering issues underlying parallel software developments are considered, and emphasis is given to designing modular, reusable software libraries. The book continues with problems in designing parallel software for GIS applications, potential vector and raster data structures, and details the algorithmic design for some major GIS operations. An implementation case study is included, based around a raster generalization problem, which illustrates some of the principles involved. Subsequent chapters review progress in parallel database technology in a GIS environment and the use of parallel techniques in various application areas, dealing with both algorithmic and implementation issues. *Parallel Processing Algorithms for GIS* should be a useful text for a new generation of GIS professionals whose principal concern is the challenge of embracing major computer performance enhancements via parallel computing. Similarly, it should be an important volume for parallel computing professionals who are increasingly aware that GIS offers a major application domain for their technology.

High Performance Computing and the Art of Parallel Programming Stan Openshaw, Ian Turton, 2005-09-19 This book provides a non-technical introduction to High Performance Computing applications, together with advice about how beginners can start to write parallel programs. The authors show what HPC can offer geographers and social scientists and how it can be used in GIS. They provide examples of where it has already been used and suggestions for other areas of application in geography and the social sciences. Case studies drawn from geography explain the key principles and help to understand the logic and thought processes that lie behind the parallel programming.

CyberGIS for Geospatial Discovery and Innovation Shaowen Wang, Michael F. Goodchild, 2018-06-26 This book elucidates how cyberGIS, that is, new generation geographic information science and systems, GIS based on advanced computing and cyberinfrastructure, transforms computation and data-intensive geospatial discovery and innovation. It comprehensively addresses opportunities and challenges, roadmaps for research and development, and major progress, trends, and impacts of cyberGIS in the era of big data. The book serves as an authoritative source of information to fill the void of introducing this exciting and growing field. By providing a set of representative applications and science drivers of cyberGIS, this book demonstrates how cyberGIS has

been advanced to enable cutting edge scientific research and innovative geospatial application development Such cyberGIS advances are contextualized as diverse but interrelated science and technology frontiers The book also emphasizes several important social dimensions of cyberGIS such as for empowering deliberative civic engagement and enabling collaborative problem solving through structured participation In sum this book will be a great resource to students academics and geospatial professionals for learning cutting edge cyberGIS geospatial data science high performance computing and related applications and sciences
