Paraneoplastic Syndromes:

Paraneoplastic Syndromes Robert B. Darnell MD, PhD, Jerome B. Posner MD, FAAN, 2011-04-01 Paraneoplastic syndromes defined in this book as disorders caused by cancer but not a direct result of cancer invasion of the affected organ or tissue once believed to be rare and esoteric neurologic disorders have assumed increasing importance as an explanation of neurologic and other symptoms in patients suffered from occult or controllable cancers This book attempts a comprehensive review of paraneoplastic syndromes from considering both clinical and pathophysiologic aspects The book is divided into 4 sections The first is an overview classifying the disorders describing a clinical approach to the diagnosis and treatment of paraneoplastic syndromes in general and identifying their pathogenesis The section discusses the clinical findings and treatment of individual paraneoplastic syndromes with chapters dedicated to each of the neurologic syndromes and a chapter discussing nonneurologic syndromes such as endocrine cutaneous and rheumatologic paraneoplastic disorders The third section discusses autoantibodies that characterize individual paraneoplastic syndromes The final section discusses the paraneoplastic syndromes associated with individual cancers

Paraneoplastic Syndromes U. Rüther, C. Nunnensiek, C. Bokemeyer, 1998-02-02 Paraneoplastic syndromes comprise a variety of signs and symptoms that are not directly caused by the primary tumor or its metastases They may be metabolic dystrophic or degenerative disorders resulting from remote humoral or hormonal effects and spontaneously disappear after successful tumor excision or chemo or radiotherapy A few years ago paraneoplastic syndromes were still thought to be rare Today we know that a single tumor is capable of producing a variety of hormones and that paraneoplastic syndromes are caused by this ectopic formation of hormones hormone like polypeptides and growth factors Recent research has shown that viral metabolic intermediates mutated oncogenes and suppressor genes may also be involved The early diagnosis of a paraneoplastic syndrome is crucial for it may point to an undetected tumor or signal tumor relapse This book covers endocrinal neurologic muscular cutaneous hematologic and organ associated paraneoplastic syndromes and provides a detailed description of their clinical symptoms diagnosis and therapy Aiming to promote the understanding of paraneoplastic syndromes this volume is an indispensable source for their diagnosis and treatment in clinical oncology

Paraneoplastic Neurologic Disorders, 2024-03-15 This book extensively reviews Paraneoplastic Neurological Syndromes in light of the most recent descriptions of autoantibodies against neuronal cell surface antigens only partly associated with paraneoplastic disorders and the introduction of new immuno oncological drugs that can contribute to causing diseases that are pathogenetically indistinguishable from paraneoplastic syndromes These two new developments have not been addressed in other volumes available on the market Section 1 focuses on immunological defense mechanisms against tumors Besides investigating the pathogenetic mechanisms of these disorders this section will also explore what the introduction of new drugs used in immune checkpoint inhibitor cancer therapy is teaching us in terms of immunopathogenesis The second section will present individual syndromes phenotypical clinical manifestations of the CNS

PNS NMJ and muscle These chapters will however be preceded by an epidemiological analysis and a chapter describing the clinical approach to patients with these disorders Consideration will also be given in specific chapters to general therapeutic strategies and the techniques used to search for diagnostically relevant autoantibodies Presentation of the individual diseases will be followed by a third section investigating the role of antibody markers presented in three chapters differentiating cytoplasmic nuclear and neuronal cell surface reactivities The innovative component of the final two sections compared to previously published volumes lies in their presentation of the profile of paraneoplastic diseases by tumor type Special attention will be given to thymoma involved particularly with novel antibodies against surface antigens and neuroendocrine tumours which are as yet comparatively unexplored in the literature Lastly a clinical update will be provided on gynecological hematological and testicular malignancies The last section will address side effects of the new immunological drugs increasingly used in cancer therapy The high number of neurological complications that occur when tumor checkpoints are inhibited against immune defences provides the ideal experimental model for understanding the pathogenesis of these diseases Profiles paraneoplastic diseases by tumor type Identifies the pathogenetic mechanisms of PNS and provides epidemiological analysis Presents individual syndromes of the CNS PNS NMJ and muscle Investigates the role of antibody markers Differentiates cytoplasmic nuclear and neuronal cell surface reactivities Discusses immune oncological drugs causing diseases that are indistinguishable from PNS Reviews therapeutic strategies and clinical approach to PNS patients

Paraneoplastic Syndromes Lora H. Winter, 2014-05-22 Paraneoplastic Syndromes PNS are a group of disorders that cause endocrinologic hematologic neurologic and dermatologic manifestations of cancer These conditions are not directly caused by tumor metastasis but rather the malignancies produce hormones and other proteins which act to disrupt the body's homeostasis thereby causing symptoms The neurological complications of PNS are the result of an immune response to tumor antigens PNS have been associated with a variety of cancers such as genitourinary ovarian and breast but are most commonly associated with neuroendocrine tumors These syndromes can even occur before the primary tumor is identified Historically these conditions were considered rare but given the difficulties with diagnosis the exact prevalence is unknown This book focuses on the symptoms diagnosis and treatment of PNS More specifically it discusses current concepts in common PNS cutaneous PNS and skin features of internal malignancy PNS in patients with malignancies of the genitourinary tract PNS polyneuropathies the correction of cancer related anemia with oxycodone and PNS associated with lung cancer

Paraneoplastic Syndromes Robert B. Darnell, Jerome B. Posner, 2011-08-22 This text provides a comprehensive review of paraneoplastic syndromes from considering both clinical and pathophysiologic aspects The book provides an overview classifying the disorders describes a clinical approach to the diagnosis and treatment of paraneoplastic syndromes in general and much more

Paraneoplastic Syndromes Lora H. Winter, 2014 Paraneoplastic Syndromes PNS are a group of disorders that cause endocrinologic hematologic neurologic and dermatologic manifestations of cancer These

conditions are not directly caused by tumour metastasis but rather the malignancies produce hormones and other proteins which act to disrupt the body's homeostasis thereby causing symptoms. The neurological complications of PNS are the result of an immune response to tumour antigens. PNS have been associated with a variety of cancers such as genitourinary, ovarian and breast but are most commonly associated with neuroendocrine tumours. These syndromes can even occur before the primary tumour is identified. Historically these conditions were considered rare but given the difficulties with diagnosis the exact prevalence is unknown. This book focuses on the symptoms, diagnosis and treatment of PNS. More specifically it discusses current concepts in common PNS, cutaneous PNS and skin features of internal malignancy, PNS in patients with malignancies of the genitourinary tract, PNS polyneuropathies, the correction of cancer-related anaemia with oxycodone and PNS associated with lung cancer.

Paraneoplastic Syndromes Thomas C. Hall, 1974

Paraneoplastic Syndromes Ursula Rüther, Christa Nunnensiek, Carsten Bokemeyer, 1998

Paraneoplastic syndromes comprise a variety of signs and symptoms that are not directly caused by the primary tumor or its metastases. They may be metabolic, dystrophic or degenerative disorders resulting from remote humoral or hormonal effects and spontaneously disappear after successful tumor excision or chemo or radiotherapy. A few years ago paraneoplastic syndromes were still thought to be rare. Today we know that a single tumor is capable of producing a variety of hormones and that paraneoplastic syndromes are caused by this ectopic formation of hormones, hormone-like polypeptides and growth factors. Recent research has shown that viral, metabolic intermediates, mutated oncogenes and suppressor genes may also be involved. The early diagnosis of a paraneoplastic syndrome is crucial for it may point to an undetected tumor or signal tumor relapse. This book covers endocrinal, neurologic, muscular, cutaneous, hematologic and organ-associated paraneoplastic syndromes and provides a detailed description of their clinical symptoms, diagnosis and therapy. Aiming to promote the understanding of paraneoplastic syndromes, this volume is an indispensable source for their diagnosis and treatment in clinical oncology.

Emergencies in Urology M. Hohenfellner, R.A. Santucci, 2007-08-18

Emergencies in Urology is a comprehensive textbook covering one of the few remaining white spots on the map of urological literature. To date only a small number of publications have been dedicated to the topic of urgent and emergent problems in urology, important as these are in our daily clinical life. Therefore the editors, both of them internationally recognized urological experts, have taken the effort to present an in-depth study into virtually every possible urgent urological situation with which a urologist may be confronted today. Consequently the book includes chapters on topics such as urological trauma, urosepsis, urinary obstruction, oncological emergencies, intra and postoperative complications, acute problems in children and many more. To obtain the best possible expertise in such a wide field, renowned expert authors have contributed their experience to this book. They did so not only by writing the regular book chapters but also by delivering short stories about urgent situations they encountered in their own professional life. These vignettes are one of the rare opportunities where experience can be relayed without restriction from one urological generation to the next.

Much work has gone into the illustrations for the book Foremost in this respect is the art of Stephan Spitzer one of the leading medical illustrators of today The result is a comprehensive well organized text in which state of the art know how didactic algorithms personal experience and detailed illustrations are combined into a unique guide of how to manage urological emergencies Neurology and General Medicine Michael Jeffrey Aminoff,2008-01-01 Better understand your patients complete medical profile and provide the best possible care This one of a kind reference provides a practical look at neurological disease and how it affects and is affected by other disease It helps neurologists manage patients with co existing medical conditions and helps internists understand and treat the neurological manifestations of patients primary diseases A new emphasis on diagnosis and management including advances in pharmacology genetic based therapies and new imaging techniques makes this 4th Edition more clinically valuable than ever Focused content highlights the vital links between neurology and other medical specialties promoting a better understanding of all disciplines as well as enhancing patient care Comprehensive coverage of advances in pharmacology such as new antibiotics for infectious diseases helps you successfully manage a full range of diseases and disorders An interdisciplinary team of authors provides insight into the neurological aspects of the conditions you see in daily practice Easy to read chapters apply equally well to neurologists and non neurologists providing essential knowledge that covers the full spectrum of medical care Expanded chapters emphasize key diagnostic and therapeutic information including appropriate testing and treatments for neurological disease An emphasis on advances in pharmacology and new imaging techniques helps you better manage your patients and understand how new drugs or therapies will affect your patients and practice New chapters on auditory and vestibular disease ocular disease and cutaneous disease provide a well rounded look at the specialty Updated illustrations make complex concepts easier to understand and apply
