Neutrino Factories and Superbeams Adam Para, 2004-10-29 The workshop has reviewed progress towards the future generation of neutrino oscillation experiments These experiments will use very intense conventional neutrino beams and novel beams derived from muons or radioactive nuclei These new facilities will provide a broad research front including muon physics and neutrino scattering experiments The main technical challenges involve construction of very intense proton beams targeting effective capture of produced particles cooling and subsequent acceleration of the resulting muons

Instrumentation in Elementary Particle Physics Luis Villaseñor, Victor Villanueva, Víctor Manuel Villanueva Sandoval Villanueva, 2003-08 The main focus of this school was to teach about experimental techniques for particle nuclear cosmic ray and medical physics by means of laboratory sessions lecture courses and review talks It was aimed primarily at graduate students with some participation of young post doctoral students This volume includes lecture courses on Particle identification tracking detectors front end electronics and signal processing triggering and data acquisition general considerations confidence intervals as well as calorimetry

Instrumentation in Elementary Particle Physics Sehban Kartal, 2000-09-21 The School is aimed at improving the level of knowledge of instrumentation with special emphasis on applications in particle physics medicine and industry Participants are advanced graduate students or young researchers the majority of them from technologically less advanced countries from all over the world while the instructors are acknowledged experts in their fields

Particle Physics and Cosmology José F. Nieves, Chung N. Leung, 2003-02-25 The Standard Model of the electromagnetic and weak interactions offers no explanations for the origin of the fermion mass and mixing parameters except that they arise from Yukawa couplings which are free parameters of the Model The problem is worse when the question of neutrino masses is considered and despite its remarkable success on many fronts the Standard Model cannot explain some important experimental observations In particular it is not possible to describe the phenomena of neutrino oscillations that has been uncovered in

recent years and from a particle physics viewpoint this provides the most convincing evidence for physics beyond the Standard Model Following the trend of the previous workshops we focus also on the presentation of the current status of the main accelerator and non accelerator neutrino mass experiments such as Super Kamiokande and SNO the future experimental projects e g MiniBoone and some of the phenomenology related to them as well as reviews of the theoretical and phenomenological ideas related to the question of neutrino masses and related topics such as the explanation for the observed baryon asymmetry in the universe
