## **Particulate Carbon Atmospheric Life Cycle:**

*Particulate Carbon* George T. Wolff, 2012-12-06 This book contains the papers and discussions from the symposium PARTICULATE CARBON Atmospheric Life Cycle held at the General Motors Research Laboratories on October 13 14 1980 This symposium which focused on atmospheric particulate elemental carbon or soot was the twenty fifth in this series sponsored by the General Motors Research Laboratories The present symposium volume contains discussions of the following aspects of particulate elemental carbon EC the atmospheric life cycle of EC including sources sinks and transport processes the role of EC in atmospheric chemistry and optics the possible role of EC in altering climate and measurement techniques as well as ambient concentrations in urban rural and remote areas Previous symposia have covered a wide range of scientific and engineering subjects Topics are selected because they are new or represent rapidly changing fields and are of significant technical importance It is ironic that the study of particulate elemental carbon or soot should meet the above criteria for selection because soot especially from coal and wood combustion has been a recognized air pollutant for centuries However since the 1950s when intense efforts to study air pollution were initiated to until a few years ago the role of elemental carbon in the atmosphere was largely ignored The major reason for this was the lack of a suitable measurement technique

Stocks, 2013-06-29 Biomass burning profoundly affects atmospheric chemistry the carbon cycle and climate and may have done so for millions of years Bringing together renowned experts from paleoecology fire ecology atmospheric chemistry and organic chemistry the volume elucidates the role of fire during global changes of the past and future Topics covered include the characterization of combustion products that occur in sediments including char soot fly ash and polycyclic aromatic hydrocarbons the calibration of these constituents against atmospheric measurements from wildland and prescribed fire emissions spatial and temporal patterns in combustion emissions at scales of individual burns to the globe
