## **Particulate Carbon Formation During Combustion:**

**Particulate Carbon** Donald Siegla, 2013-11-11 The goal of the symposium Particulate Carbon Formation During Combustion held at the General Motors Research Laboratories on October 15 and 16 1980 was to discuss fundamental aspects of soot formation and oxidation in combustion systems and to stimulate new research by extensive interactions among the participants This book contains the papers and discussions of that symposium the 26th in an annual series covering many different disciplines which are timely and of interest to both General Motors and the technical community at large The subject of this symposium has considerable relevance for man in his effort to control and preserve his environment Emission of particulate carbon into the atmosphere from combustion sources is of concern to scientists and laymen alike The hope of reducing this emission clearly requires an understanding of its formation during the combustion process itself an area of considerable long term research interest It is our hope that this symposium has served to summarize what is known so that what remains to be learned can be pursued with greater vigor

Rescigno, 1979-08-01 The First Asilomar Conference on Electron and Photon Molecule Collisions was held August 1-4 1978 in Pacific Grove California This meeting brought together forty scientists who are actively involved in theoretical studies of electron scattering by and photoionization of small molecules In this volume are collected the contributions of the invited speakers as well as the roundtable and evening discussions condensed from taped recordings of the entire proceedings The subject matter reflects current activity in the field and describes many of the techniques that are being developed and applied to molecular collision problems We would like to thank the Air Force Office of Scientific Research AFOSR and the Office of Naval Research ONR for providing the financial support that made this conference possible Special thanks are due to Dr Robert Junker of ONR and Dr Ralph Kelley of AFOSR for the interest and encouragement they provided in all phases of

this meeting We also thank all the participants whose efforts and contributions made this conference a success Finally we thank Ms Charlotte MacNaughton and Ms Sara Jackson for the many hours they spent transcribing tapes and preparing this volume for publication

*Fundamentals of Air Pollution Engineering* Richard C. Flagan, John H. Seinfeld, 2012 A rigorous and thorough analysis of the production of air pollutants and their control this text is geared toward chemical and environmental engineering students Topics include combustion principles of aerosol behavior theories of the removal of particulate and gaseous pollutants from effluent streams and air pollution control strategies 1988 edition Reprint of the Prentice Hall Inc Englewood Cliffs New Jersey 1988 edition

*Carbon in the Galaxy: Studies from Earth and Space* Jill C. Tarter, 1990

**Advanced Combustion Science** Tsuneo Someya, 2012-12-06 Non uniform combustion as encountered in diesel and gas turbine engines furnaces and boilers is responsible for the conversion of fossil fuel to energy and also for the corresponding formation of pollutants In spite of great research efforts in the past the mechanism of non uniform combustion has remained less explored than that of other combustion types since it consists of many mostly transient processes which influence each other In view of this background a group research project Exploration of Combustion Mechanism was established to explore the mechanism of combustion especially that of diffusive combustion and also to find efficient ways to control the combustion process for better utilization of fuel and the reduction of pollutant emission The group research was started after preparatory activity of 2 years in April 1988 for a period of 3 years as a project with a Grant in Aid for Scientific Research of Priority Area subsidized by the Ministry of Education Science and Culture of Japan The entire group of 43 members was set up as an organizing committee of 13 members and five research groups consisting of 36 members The research groups were 1 Steady combustion 2 Unsteady spray combustion 3 Control of combustion 4 Chemistry of combustion and 5 Effects of fuels At the beginning of the project it was agreed that we should pursue the mechanism of combustion from a scientific viewpoint namely the target of the project was to obtain the fundamentals or know why rather than know how of combustion

**Air Pollution and Control** Nikhil Sharma, Avinash Kumar Agarwal, Peter Eastwood, Tarun Gupta, Akhilendra P Singh, 2017-12-13 This book focuses on various aspects related to air pollution including major sources of air pollution measurement techniques modeling studies and solution approaches to control The book also presents case studies on measuring air pollution in major urban areas such as Delhi India The book examines vehicles as a source of air pollution and addresses the quantitative

analysis of engine exhaust emissions Subsequent chapters discuss particulate matter from engines and coal fired power plants as a major pollutant as well as emission control techniques using various after treatment systems The book s final chapter considers future perspectives and a way forward for sustainable development It also discusses several emission control techniques that will gain relevance in the future when stricter emission norms will be enforced for international combustion IC engines as well as power plants Given its breadth of coverage the book will benefit a wide variety of readers including researchers professionals and policymakers
