- Each partner reports his or her share of partnership income or loss on Schedule E of his or her Form 1040.

**The Logic of Subchapter K** Laura E. Cunningham, Noël B. Cunningham, 1996 Problems and Solutions in Partnership Tax Joni Larson, 2014 The theory behind the flow through tax treatment given partnerships is relatively straight forward the partnership files an information return paying no tax and all partnership items are allocated among and reported by the partners on their individual income tax returns and they pay the associated tax However the rules that govern how the items are allocated are complex layered and intricate In addition there are related rules such as those for the determination of basis how to tax sales of partnership interests and how to treat the distribution of cash or property from the partnership Often the best way to understand how complex rules work and the results they are intended to bring about are seen best through examples of application of the rules Problems and Solutions in Partnership Tax does just that it provides numerous examples of how the rules for partnerships are applied It begins with the most basic such as the rules governing the contribution of property to a partnership selection of the taxable year and computation of partnership taxable income It also

covers the more complex rules such as those governing special allocations of recourse deductions allocation of recourse liabilities allocation of nonrecourse deductions allocation of nonrecourse liabilities and disproportionate distributions Throughout the examples are keyed to the partnership balance sheet showing the effect the applicable rule has on the relationship of the partners to the partnership and the partners to each other This book is a great resource for anyone practicing partnership taxation ***Understanding Partnership and LLC Taxation*** Jerold A. Simmons,1995-06 ***Partnership Income Taxation*** JAMES R.. LYONS REPETTI (WILLIAM H.. LUKE, CHARLENE D.),William Lyons,Charlene Luke,2023-04-26 This book provides the simplest possible introduction of partnership taxation to students and beginning practitioners trying to understand the taxation of partnerships Partnership taxation is an intricate

body of law with the result that any simplified description of its rules would be so misleading as to be useless We have therefore tried to make the subject accessible not by paraphrasing the rules but by including over one hundred and forty examples of the rules that are as straightforward as possible The text and examples focus on simple partnerships and limited liability companies that hold few assets and engage in routine transactions The text places the rules in context by pointing out the purposes of the statute and regulations and presenting background information about practical matters such as how partnerships maintain capital accounts and how nonrecourse financing works Using many examples it then shows the operation of the rules in everyday cases encountered by practitioners This is not a reference book many interesting and difficult issues have been ignored Some matters such as the application of 736 to noncash distributions and the taxation of tiered partnerships are not discussed at all Most of the points that are addressed however are discussed at considerable length Our goal is to give students and beginning practitioners background material and illustrations so that they can begin to understand and work with a statute that was drafted for and by experienced practitioners and so that they can be prepared to make sense of the current law and any future changes Most chapters end with a section comparing the tax treatment of partners with that of the shareholders of S corporations Many students encountering partnership taxation for the first time have already studied subchapter S We expect that an examination of some of the basic differences between subchapters S and K should help those students understand both subjects
