Virtual Competition Ariel Ezrachi, Maurice E. Stucke, 2016-11-14 A fascinating book about how platform internet companies Amazon Facebook and so on are changing the norms of economic competition Fast Company Shoppers with a bargain hunting impulse and internet access can find a universe of products at their fingertips But is there a dark side to internet commerce This thought provoking expos invites us to explore how sophisticated algorithms and data crunching are changing the nature of market competition and not always for the better Introducing into the policy lexicon terms such as algorithmic collusion behavioral discrimination and super platforms Ariel Ezrachi and Maurice E Stucke explore the resulting impact on competition our democratic ideals our wallets and our well being We owe the authors our deep gratitude for anticipating and explaining the consequences of living in a world in which black boxes collude and leave no trails behind They make it clear that in a world of big data and algorithmic pricing consumers are outgunned and antitrust laws are outdated especially in the United States Science A convincing argument that there can be a darker side to the growth of digital commerce The replacement of the invisible hand of competition by the digitized hand of internet commerce can give rise to anticompetitive behavior that the competition authorities are ill equipped to deal with Burton G Malkiel Wall Street Journal A convincing case for the need to rethink competition law to cope with algorithmic capitalism s potential for malfeasance John Naughton The Observer

The Versatility of the Real Estate Asset Class - the Singapore Experience Kim Hin David HO, 2021-02-22 Chapter 1 takes a close look at two types of heterogeneous investors momentum and disposition to form a unique difference model to interpret housing price dynamics Three parameters are crucial namely auto correlation the rate of mean reversion and the contemporaneous adjustment towards long term equilibrium price The key implication is that the 2006 boom of the Singapore private housing market does not offer as large a magnitude as that from the price gain in the 1990 s boom and recovery over the long term Singapore s private housing market is low risk offering stable returns

owing to virtually no divergence even in the speculative 1990s The best way to invest is to consider the momentum strategy and avoid the herd behaviour for profit sustainability For policy makers the Singapore private housing market is over damped in the long run Chapter 2 adopts game theory to look at the private residential development oligopolistic market the determination of residential development sale prices in an uncertain market and under incomplete information of competing developers the dynamic interaction among developers the time lags of the development project completion from project start and the launching of the residential development for sale before completion and the residential development's own capacity constraints Developers tend to cooperate for long term benefit leading to a sales slowdown Relatively high profits earnable in the first few periods provide an allowance to price undercut others to sell much faster First mover advantage in a new market is evident As uncertainty rises prices decrease while price variability increases Chapter 3 looks at the institutional nature of legal origin and the total returns TRs derived from investing in a country's direct real estate and via the adoption of a multi factor arbitrage pricing theory APT model The 1st and 4th order autoregressive model is adopted to de smooth the TRs De smoothed data is used in conjunction with 2 macroeconomic variables real GDP growth rate and interest rate and 1 real estate risk factor vacancy rate to form the multi factor structural model A pooled panel analysis is conducted with the law system dummies denoting British legal origin and French legal origin and the factor loadings i e the sensitivity of the risk factor to the TRs Macroeconomic and real estate risk factors in equilibrium affect the TRs Vacancy rate commands high and significant risk premium owing to its direct impact on the TRs relative to GDP growth rate and interest rate Chapter 4 is concerned with the real estate mezzanine investment REMI a new financial instrument for Asia's real estate market and examines the REMI structure the measurement and characteristics of its risks and returns via a forward looking binomial asset tree BAT model Risk neutral pricing probability is adopted REMI bears more risk than typical commercial bank loans resulting in higher interest rates than pure equity Different risk issues focus on two major sources the financial loan to value LTV ratio risk and the real estate and capital markets risk Chapter 4 fulfils the need to close the gap concerning the REMI structure and performance in the steady state utilizing reliable authoritative information and data sources Lastly Chapter 5 offers this book's conclusion
