**Accounting for Aggression** Gerda Siann,2024-08-08 The despair and incomprehension that often seem to be the only possible response to acts of aggression and violence have led to attempts by academics and writers from a wide variety of backgrounds to understand and explain such behaviour The concern and anxiety that is felt by many people about this subject is such that some of their accounts notably by Konrad Lorenz Desmond Morris Robert Ardrey and Anthony Storr

have become popular and even best selling books Originally published in 1985 *Accounting for Aggression* provides a comprehensive synthesis and assessment of these writings and other contemporary theory and research on aggression and violence at the time The author presents a variety of accounts of aggression drawing on original work in the areas of biology sociobiology ethology psychology and sociology Each account is evaluated according both to the criteria of scientific methodology and to the extent to which it illuminates our understanding and appears to have a lasting explanatory value In the last chapter the author presents an integrative approach to the subject area which synthesizes those findings for which there appears to be substantial empirical support within a framework of the meaning that aggressive and violent behaviour offers to those who carry it out *Accounting for Aggression* will be of great value to students and practitioners in the fields of psychology psychiatry social work and education Furthermore it will be welcomed by interested members of the general public who are concerned with issues such as whether or not violence is inherent in human nature the extent to which interpersonal violence is related to group violence and the extent to which violence in the media affects violent behaviour

*Neurobiopsychosocial Perspectives on Aggression and Violence* József Haller, 2020-09-10. This book bridges the gap between basic science which deals with general concepts of aggression and its neurobiological foundations and law enforcement as one of the applied fields of aggression research. It addresses the current state of research and practice and compares and integrates the concept of aggression with violent crime. Chapters examine the types of criminal careers that cross the boundary between the two and summarize the biological, psychological and social factors that underlie particular types of criminal careers. Subsequent chapters discuss overlaps between biological and psychological factors and detail how and to what extent aggression may serve as explanatory mechanisms for violence. The book also discusses the relationship between social problems and neuropsychological deficits, addressing how the neuropsychological deficits lead to the intergenerational recycling of social problems. Finally, the volume explores violence and aggression from a neurobiological perspective. Topics featured in this book include: The heritability of aggressiveness and violence proneness; Glucocorticoids in humans; Aggression circuitry in animals; Distorted circuitry in violent animals; Biological factors of psychological change.

**Special Issue on Aggression in Young Children**

International Society for Research on Aggression. Meeting, 1985. *Information Service*, 1928. Television and Aggression J. Ronald Milavsky, 1982. The Sixth Pan American Conference Foreign Policy Association, 1928. *Violence and Consumerism in Bret Easton Ellis's American Psycho and Chuck Palahniuk's Fight Club* Michael Frank, 2009-11-10.

Examination Thesis from the year 2009 in the subject English Language and Literature Studies, Literature grade 1.5, University of Heidelberg, language English, abstract: Art has always reflected society. *Fight Club* examines violence and the roots of frustration that are causing people to reach out for such radical solutions. And that's exactly the sort of discussion we should be having about our culture. Because a culture that doesn't examine its violence is a culture in denial, which is much more dangerous. This assessment of *Fight Club* by Edward Norton, who plays the narrator in the novel's movie adaptation, explains the reasoning behind this thesis, which examines the basic principles of today's consumer culture, its connection to aggression and violence, and the way these topics are presented in two contemporary novels: Bret Easton Ellis's *American Psycho* and Chuck Palahniuk's *Fight Club*. In these books, the respective protagonists face similar deadlocks connected to life in the consumerist world of the 1980s and 1990s. Despite evidently having everything a person could ask for, both main characters' lives remain unfulfilled, leaving them frustrated and dissatisfied. As it turns out, acts of violence become the only

thing that lets them get away from the boredom of their daily routine and gives them a sense of satisfaction

**Aggression, Theoretical and Empirical Reviews: Theoretical and methodological issues** Russell G. Geen, Edward I. Donnerstein, 1983

**Biology of Aggression** Randy J. Nelson, 2005-08-25

Unchecked aggression and violence take a significant toll on society. Even if we manage to avoid being the direct victim of a violent act, the effects of aggression and violence reach us all. We hear about the mauling of a woman by an aggressive dog, our children are bullied at school, or we deal with impulsive violence while commuting to work or attending a sporting event. Reflecting psychology in general, the dominant roles of learning and environmental influences, both social and nonsocial, have traditionally been prominent in discussions of the etiology of human aggression. Biological factors have not been considered sufficiently important to investigate in the search for ways of dealing with human aggression or violence. With recent advances in pharmacology and genetic manipulation techniques, however, new interest has developed in the biological mechanisms of both non-human and human aggression. Although aggression is certainly a complex social behavior with multiple causes, molecular biological factors should not be overlooked as they may well lead to interventions that prevent excess aggressive behaviors. The primary goal of this book is to summarize and synthesize recent advances in the biological study of aggression. As most aggressive encounters among human and non-human animals represent a male proclivity, the research in this book describes and discusses studies using the most appropriate murine model: testosterone-dependent offensive inter-male aggression, which is typically measured in resident intruder or isolation-induced aggression tests. The research also emphasizes various molecules that have been linked to aggression tests. The research also emphasizes various molecules that have been linked to aggression by the latest gene targeting and pharmacological techniques. Although the evidence continues to point to androgens and serotonin 5-HT as major hormonal and neurotransmitter factors in aggressive behavior, recent work with GABA, dopamine, vasopressin, and other factors such as nitric oxide has revealed significant interactions with the neural circuitry underlying aggression. This book is organized according to levels of analysis. The first section examines the genetic contributions to aggression in species ranging from crustaceans to humans. The section summarizes the involvement of various neurotransmitters and neuromodulators in aggressive behavior. The third section summarizes the influence of hormones on aggression, primarily in humans. All chapters emphasize future directions for research on aggression and reveal important domains that have received comparatively less attention in this literature. Considered together, these chapters provide up-to-date coverage of the biology of aggression by some of the leading authorities currently working in this field. *Biology of Aggression* will direct future research to continue the recent advances in the pharmacological and genetic approaches to understanding aggression and violence. It promises to be a valuable resource for professional and student researchers in neuroscience, psychiatry, cognitive and developmental psychology, behavioral biology, and veterinary medicine.
