

# MANOMETRIC METHOD

- If any of the substrates or products of an enzyme-catalysed reaction is a gas, the course of the reaction may be followed by manometric techniques.
- The sample and reagents are put into different compartments in the reaction vessel and mixed together at zero time; then, as the reaction proceeds, the uptake or evolution of gas is indicated by the movement of fluid in the manometer tube.

Manometric methods may be used to investigate reactions where a gas is consumed, e.g. that catalysed by glucose oxidase, where molecular oxygen is a substrate.

They may also be used when a gas is produced, e.g. to monitor  $\text{CO}_2$  production in reactions catalysed by decarboxylases.

Barnothy,2012-12-06 We define biomagnetism broadly as the science of processes and functions in living organisms induced by static magnetic fields Biomagnetic research has greatly increased since the publication of the first volume of this series While much of this work has been reported in various international journals there exists a need for this work to be collected together in one place This book covers a rather wide area of research both with respect to the strength of the field ranging from zero to 150 000 oersteds and with respect to the various specimens and their biological functions It is designed primarily to help clarify the action of magnetic fields on biological systems with the hope of achieving a better understanding of the fundamental physiological processes occurring in them In some chapters it is suggested that magnetic fields could ultimately be used in the treatment of disease I would like to take this occasion to thank the contributors for their
