Managing Retail Consumption:

Managing Retail Consumption Barry J. Davies, Philippa Ward, 2002-03-01 Managing Retail Consumption locates retailing in its social context and develops the position that retailing can be regarded as a site of consumption identity creation and pleasure. It develops a consumption perspective which provides a balanced approach between management and the social sciences. The consumption perspective considers the way retail sites are created or manipulated with a view to understanding the interplay between the provider's requirements and the consumer's ability to manage structure and edit their repertoire of responses. The text looks at how retailing works and examines the narrative nature of retailing: how it can tell a story, be playful and form a major element in the consideration of management of retail operations. It also examines retail in its social context including examples and cases of numerous well-known companies such as Tesco, Next and Galleries Lafayette.

Managing Hospitality Experiences Alexandra Kenyon, Peter Robinson, James Musgrave, 2020-06-25 Using examples from the gamut of hospitality, this book explores issues around people, services and spaces. It covers management issues such as marketing, human resources, operations, quality management, facilities management, project management and strategy while considering hospitality operations within their wider geo-social and geo-environmental settings. This book includes a range of important contemporary topics such as sustainability, resilience and ethics supported throughout by learning objectives, case studies, review questions, links to videos and further reading suggestions.

Managing Energy Risk Markus Burger, Bernhard Graeber, Gero Schindlmayr, 2014-09-09 An overview of today's energy markets from a multi-commodity perspective. As global warming takes center stage in the public and private sectors, new debates on the future of energy markets and electricity generation have emerged around the world. The Second Edition of Managing Energy Risk has been updated to reflect the latest products, approaches and energy market evolution. A full 30% of the content accounts for changes that have occurred since the publication of the first edition. Practitioners will appreciate this contemporary approach to energy and the comprehensive information on recent market influences. A new chapter is devoted to the growing importance of renewable energy sources, related subsidy schemes and their impact on energy markets. Carbon emissions certificates, post-Fukushima market shifts and improvements in renewable energy generation are all included. Further, due to the unprecedented growth in shale gas production in recent years, a significant amount of material on gas markets has been added in this edition. Managing Energy Risk is now a complete guide to both gas and electricity markets and gas-specific models like gas storage and swing contracts are given their due. The unique practical approach to energy trading includes a comprehensive explanation of the interactions and relations between all energy commodities. Thoroughly revised to reflect recent changes in renewable energy, impacts of the financial crisis and market fluctuations in the wake of Fukushima. Emphasizes both electricity and gas with all new gas valuation models and a thorough description of the gas market. Written by a team of authors with theoretical and practical expertise, blending mathematical finance and technical optimization.

Covers developments in the European Union Emissions Trading Scheme as well as coal oil natural gas and renewables The latest developments in gas and power markets have demonstrated the growing importance of energy risk management for utility companies and energy intensive industry By combining energy economics models and financial engineering Managing Energy Risk delivers a balanced perspective that captures the nuances in the exciting world of energy
