New Views of Evolution George Perrigo Conger, 1929 **Biological Information: New Perspectives - Proceedings Of The Symposium** John C Sanford, Robert J Marks II, Michael J Behe, William A Dembski, Bruce L Gordon, 2013-06-03 In the spring of 2011 a diverse group of scientists gathered at Cornell University to discuss their research into the nature and origin of biological information This symposium brought together experts in information theory computer science numerical simulation thermodynamics evolutionary theory whole organism biology developmental biology

molecular biology genetics physics biophysics mathematics and linguistics This volume presents new research by those invited to speak at the conference The contributors to this volume use their wide ranging expertise in the area of biological information to bring fresh insights into the many explanatory difficulties associated with biological information These authors raise major challenges to the conventional scientific wisdom which attempts to explain all biological information exclusively in terms of the standard mutation selection paradigm Several clear themes emerged from these research papers 1 Information is indispensable to our understanding of what life is 2 Biological information is more than the material structures that embody it 3 Conventional chemical and evolutionary mechanisms seem insufficient to fully explain the labyrinth of information that is life By exploring new perspectives on biological information this volume seeks to expand encourage and enrich research into the nature and origin of biological information

*Evolutionary Medicine and Health* Wenda R. Trevathan, E. O. Smith, James McKenna, 2008-09-04 Building on the success of their groundbreaking anthology *Evolutionary Medicine* OUP 1999 Wenda R Trevathan E O Smith and James J McKenna provide an up to date and thought provoking introduction to the field with this new collection of essays Ideal for courses in evolutionary medicine medical anthropology and the evolution of human disease *Evolutionary Medicine and Health New Perspectives* presents twenty three original articles that examine how human evolution relates to a broad range of contemporary health problems including infectious chronic nutritional and mental diseases and disorders Topics covered include disease susceptibility in cultural context substance abuse and addiction sleep disorders preeclampsia altitude related hypoxia the biological context of menstruation and the role of stress in modern life An international team of preeminent scholars in biological anthropology medicine biology psychology and geography contributed the selections Together they represent a uniquely integrative and multidisciplinary approach that takes into account the dialogue between biology and culture as it relates to understanding treating and preventing disease A common theme throughout is the description of cases in which biological human development conflicts with culturally based individual behaviors that determine health outcomes Detailed evidence based arguments make the case that all aspects of the human condition covered in the volume have an evolutionary basis while theoretical discussions using other empirical evidence critique the gaps that still remain in evolutionary approaches to health *Evolutionary Medicine and Health New Perspectives* features an introductory overview that covers the field's diverse array of topics questions lines of evidence and perspectives In addition the editors provide introductions to each essay and an extensive bibliography that represents a state of the art survey of the literature A companion website at [www.oup.com/us/evolmed](http://www.oup.com/us/evolmed) offers a full bibliography and links to source articles reports and databases Written in an engaging style that is accessible to students professionals and general readers this book offers a unique look at how an evolutionary perspective has become increasingly relevant to the health field and medical practice

Natural Selection Richard G. Delisle, 2021-02-27 This book contests the general view that natural selection constitutes the explanatory core of evolutionary biology It invites the reader to consider

an alternative view which favors a more complete and multidimensional interpretation It is common to present the 1930-1960 period as characterized by the rise of the Modern Synthesis an event structured around two main explanatory commitments

- 1 Gradual evolution is explained by small genetic changes variations oriented by natural selection a process leading to adaptation
- 2 Evolutionary trends and speciation events are macroevolutionary phenomena that can be accounted for solely in terms of the extension of processes and mechanisms occurring at the previous microevolutionary level

On this view natural selection holds a central explanatory role in evolutionary theory one that presumably reaches back to Charles Darwin's *Origin of Species* a view also accompanied by the belief that the field of evolutionary biology is organized around a profound divide theories relying on strong selective factors and those appealing only to weak ones If one reads the new analyses presented in this volume by biologists historians and philosophers this divide seems to be collapsing at a rapid pace opening an era dedicated to the search for a new paradigm for the development of evolutionary biology Contrary to popular belief scholars position on natural selection is not in itself a significant discriminatory factor between most evolutionists In fact the intellectual space is quite limited if not non-existent between on the one hand Darwinists who play down the central role of natural selection in evolutionary explanations and on the other hand non-Darwinists who use it in a list of other evolutionary mechanisms The mechanism-centered approach to evolutionary biology is too incomplete to fully make sense of its development In this book the labels created under the traditional historiography Darwinian Revolution Eclipse of Darwinism Modern Synthesis Post-Synthetic Developments are thus re-evaluated This book will not only appeal to researchers working in evolutionary biology but also to historians and philosophers
