**A New Paradigm Of Knowledge Engineering By Soft Computing** Liya Ding,2001-03-09 Soft computing SC consists of several computing paradigms including neural networks fuzzy set theory approximate reasoning and derivative free optimization methods such as genetic algorithms The integration of those constituent methodologies forms the core of SC In addition the synergy allows SC to incorporate human knowledge effectively deal with imprecision and uncertainty and learn to adapt to unknown or changing environments for better performance Together with other modern technologies SC and its applications exert unprecedented influence on intelligent systems that mimic human intelligence in thinking learning reasoning and many other aspects Knowledge engineering KE which deals with knowledge acquisition representation validation inferencing explanation and maintenance has made significant progress recently owing to the indefatigable efforts of researchers Undoubtedly the hot topics of data mining and knowledge data discovery have injected new life into the classical AI world This book tells readers how KE has been influenced and extended by SC and how SC will be helpful in pushing the frontier of KE further It is intended for researchers and graduate students to use as a reference in the study of knowledge engineering and intelligent systems The reader is expected to have a basic knowledge of fuzzy logic neural networks genetic algorithms and knowledge based systems

**Knowledge-Based Intelligent Information and Engineering Systems** Vasile Palade,2003-08-28 During recent decades we have witnessed not only the introduction of automation into the work environment but we have also seen a dramatic change in how automation has influenced the conditions of work While some 30 years ago the addition of a

computer was considered only for routine and boring tasks in support of humans the balance has dramatically shifted to the computer being able to perform almost any task the human is willing to delegate The very fast pace of change in processor and information technology has been the main driving force behind this development Advances in automation and especially Artificial Intelligence AI have enabled the formation of a rather unique team with human and electronic members The team is still supervised by the human with the machine as a subordinate associate or assistant sharing responsibility authority and autonomy over many tasks The requirement for teaming human and machine in a highly dynamic and unpredictable task environment has led to impressive achievements in many supporting technologies These include methods for system analysis design and engineering and in particular for information processing for cognitive and complex knowledge 1 engineering
