New Techniques Of Optical Microscopy And Microspectroscopy:

New Techniques of Optical Microscopy and Microspectroscopy Richard J. Cherry, 1991 The advent of various techniques such as confocal microscopy and the availability of extremely sensitive digital imaging devices are revolutionizing the field of optical microscopy This book intends to bring together the various advances in order to provide an account of what can be achieved with modern optical microscopic methods *Methods in Plant Electron Microscopy and Cytochemistry* William V. Dashek, 2000-06-29 Hands on experimentalists describe the cutting edge microscopical methods needed for the effective study of plant cell biology today These powerful techniques all described in great detail to ensure successful experimental results range from light microscope cytochemistry autoradiography and immunocytochemistry to recent developments in fluorescence confocal and dark field microscopies Important advances in both conventional and scanning electron microscopies are also fully developed together with such state of the art ancillary techniques as high resolution autoradiography immunoelectron microscopy X ray microanalysis and electron systems imaging Easy to use and up to date *Methods in Plant Electron Microscopy and Cytochemistry* offers today s plant scientists a first class collection of readily reproducible light and electron microscopical methods that will prove the new standard for all working in the field

book with an emphasis on practical experiments results analysis and medical and diagnostic applications This book is unique in that it addresses both the parent spectroscopy and the microspectroscopic aspects in one volume Part I covers the basic theory principles and instrumentation of classical vibrational infrared and Raman spectroscopy It is aimed at researchers with a background in chemistry and physics and is presented at the level suitable for first year graduate students The latter half of Part I is devoted to more novel subjects in vibrational spectroscopy such as resonance and non linear Raman effects vibrational optical activity time resolved spectroscopy and computational methods Thus Part 1 represents a short course into modern vibrational spectroscopy Part II is devoted in its entirety to applications of vibrational spectroscopic techniques to biophysical and bio structural research and the more recent extension of vibrational spectroscopy to microscopic data acquisition Vibrational microscopy or microspectroscopy has opened entirely new avenues toward applications in the biomedical sciences and has created new research fields collectively referred to as Spectral Cytopathology SCP and Spectral Histopathology SHP In order to fully exploit the information contained in the micro spectral datasets methods of multivariate analysis need to be employed These methods along with representative results of both SCP and SHP are presented and discussed in detail in Part II
