Murphy, 1922    **Construction of Mortality Tables From the Records of Insured Lives (Classic Reprint)** Ray D. Murphy, 2015-07-20 Excerpt from Construction of Mortality Tables From the Records of Insured Lives A mortality table starts with a group of persons at a specified age and shows the number of survivors at each subsequent age There is also generally set down the number dying in each year of age The radix of the table or the number living at the youngest age shown is arbitrarily selected Then from the values of  $p_x$  for each age the values of  $l_x$  may be computed successively for the higher ages by the relation  $l_x = p_x l_{x-1}$  As a general rule the construction of a mortality table based on the records of insured lives is effected by ascertaining the value of  $q_x$  for each age This value is obtained by dividing  $x$  by  $E_x$  where  $x$  represents the deaths and  $E_x$  the exposed to risk of death for the year between ages  $x$  and  $x-1$  in the data under observation In practice some persons will be found who are under observation for only a part of a given year of age either because they enter the experience after the beginning of the year or because they pass out of it for causes other than death before the end of the year In such cases each person is counted in computing  $E_x$  as a fraction equal to the proportion of the year under observation The degree of accuracy with which such fractions are computed varies according to the method used in tabulating the data A person who dies between ages  $x$  and  $x-1$  must be included in  $E_x$  as exposed to risk for the full year and not a fraction because  $q_x$  represents the proportion of  $l_x$  persons alive at age  $x$  who will not be alive at age  $x-1$  About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the
