Melamed, Paul Nettesheim, 1982-12-29 *Morphogenesis of Lung Cancer*, 1982 Principles and Practice of Lung Cancer Harvey I. Pass, David P. Carbone, David H. Johnson, John D. Minna, Giorgio V. Thoroughly revised and updated this Fourth Edition is the most comprehensive current reference on lung cancer with contributions from the world's foremost surgeons, radiation oncologists, medical oncologists, pulmonologists, and basic scientists. Coverage includes complete information on combined modality treatments for small cell and non-small cell lung cancer and on complications of treatment and management of metastases. Emphasis is also given to early detection, screening, prevention, and new imaging techniques. This edition has expanded thoracic oncology chapters including thymus, mesothelioma, and mediastinal tumors; more detailed discussion of targeted agents and state-of-the-art information on newer techniques in radiotherapy. Other highlights include more international contributors and greater discussion of changes in lung cancer management in each region of the world. A new editor, Giorgio Scagliotti MD from the University of Turin, has coordinated the accounts of European activities. A companion website includes the full text online and an image bank.

**Lung Cancer Metastasis** Venkateshwar Keshamouni, Douglas Arenberg, Gregory Kalemkerian, 2009-09-18 Lung cancer is the leading cause of cancer-related mortality. Metastatic lung cancer is responsible for more than ninety percent of lung cancer-related deaths. However, relatively little progress has been made in understanding the process of lung cancer metastasis. The two main aims of this book are: a) to introduce clinical aspects to basic scientists and basic molecular and cellular concepts to clinical investigators in order to promote collaboration and foster much-needed translational research; and b) to introduce new and emerging concepts and approaches in metastasis research to the lung cancer research community at large. In this attempt, the book will cover a broad spectrum of subjects ranging from the current trends in the clinical management of the metastatic disease to the systems biology approach for gaining insights into the mechanisms of metastasis. Some of the subjects covered will include defining basic hallmarks of a metastatic cell, the concept of tumor stem cells, epithelial-mesenchymal transitions, evasion of immune surveillance, tumor-stromal interactions, angiogenesis, molecular imaging, and biomarker discovery.
