Morphology Development Systematic Rele:

Microstructure and Modeling of Edge Dislocations and Grain Boundaries in Polydiacetylenes Patricia Michelle Wilson, 1994 The organization of polymers near defects is a general question of both scientific and technological interest The relationship between microstructure and properties must involve a discussion of defects But defects in macromolecular materials are not as clearly defined as in more ordered systems Schemes to classify defects must rely on the symmetry of the phase the dimensionality of the defect and the nature of the deformation induced Several researchers such as Kleman 1983 and Wunderlich 1973 have classified macromolecular defects using these constraints Defects in polymer systems have not been thoroughly studied because of difficulties in imaging the local regions around defects in organic materials with high energy electron beams Also defects are difficult to isolate and study in detail because most polymer systems have a intermediate amount of disorder present in the bulk structure

Assumptions Inhibiting Progress in Comparative Biology Brian I. Crother, Lynne R. Parenti, 2016-11-18 This book is a thought provoking assessment of assumptions inhibiting progress in comparative biology The volume is inspired by a list generated years earlier by Donn Rosen one of the most influential innovative and productive comparative biologists of the latter 20th century His list has assumed almost legendary status among comparative evolutionary biologists Surprisingly many of the obstructing assumptions implicated by Rosen remain relevant today Any comparative biologist hoping to avoid such assumptions in their own research will benefit from this introspective volume
