Open Distributed Processing and Distributed Platforms Jerome Rolia, Jacob Slonim, John Botsford, 2016-01-09

Advances in computer networking have allowed computer systems across the world to be interconnected Open Distributed Processing ODP systems are those that support heterogeneous distributed applications both within and between autonomous organizations Many challenges must be overcome before ODP systems can be fully realized This book describes the recent advances in the theory and practice of developing deploying and managing open distributed systems Applications of these systems include but are not limited to telecommunication medical and large scale transaction processing and electronic commerce systems All of these are currently developed on distributed platforms For anybody working in industry or research in this field Open Distributed Processing and Distributed Platforms will prove an invaluable text

Distributed Platforms Alexander Schill, 2013-04-18 Client Server applications are of increasing importance in industry and have been improved by advanced distributed object oriented techniques dedicated tool support and both multimedia and mobile computing extensions Recent responses to this trend are standardized distributed platforms and models including the Distributed Computing Environment DCE of the Open Software Foundation OS F Open Distributed Processing ODP and the Common Object Request Broker Architecture CORBA of the Object Management Group OMG These proceedings are the compilation of papers from the technical stream of the IFIP/IEEE International Conference on Distributed Platforms Dresden Germany This conference has been sponsored by IFIP TC6 1 by the IEEE Communications Society and by the German Association of Computer Science GI Gesellschaft für Informatik ICDP 96 was organized jointly by Dresden University of Technology and Aachen University of Technology It is closely related to the International Workshop on OSF DCE in Karlsruhe 1993 and to the IFIP International Conference on Open Distributed Processing ICDP has been designed to bring together researchers and practitioners who are studying and developing new methodologies tools and technologies for advanced client server environments distributed systems and network applications based on distributed platforms

Middleware'98 Nigel Davies, Kerry Raymond, Jochen Seitz, 2012-12-06 Welcome to Middleware 98 and to one of England's most beautiful regions In recent years the distributed

systems community has witnessed a growth in the number of conferences leading to difficulties in tracking the literature and a consequent loss of awareness of work done by others in this important field The aim of Middleware 98 is to synthesise many of the smaller workshops and conferences in this area bringing together research communities which were becoming fragmented The conference has been designed to maximise the experience for attendees This is reflected in the choice of a resort venue rather than a big city to ensure a strong focus on interaction with other distributed systems researchers The programme format incorporates a question and answer panel in each session enabling significant issues to be discussed in the context of related papers and presentations The invited speakers and tutorials are intended to not only inform the attendees but also to stimulate discussion and debate

Open Distributed Processing and Multimedia

Gordon Blair, Jean-Bernard Stefani, 1997 The need to support multimedia in Open Distributed Processing ODP environments is a major challenge when setting up distributed network systems This book has been written specifically to address the problems of supporting multimedia applications such as desktop conferencing multimedia email video on demand systems and virtual reality environments in ODP standards and platforms This book provides an introduction to the field of ODP with detailed descriptions of ISO s RM ODP OMG s CORBA and Open Group s DC a description of the requirements of distributed multimedia applications in terms of support for continuous media quality of service real time synchronization and multiparty communications an evaluation of these ODP platforms with respect to their support for multimedia a detailed description of an architecture for ODP standards and platforms supporting multimedia a description of two proof of concept demonstrators focusing on the programming model and on engineering support For information on Middleware 98 IFIP International Conference on Distributed Systems Platforms and Open Distributed Processing 15-18 September 1998 link to [Formal Methods for Distributed Processing](#) Howard Bowman, John Derrick, 2001-10-22 Originally published in 2002 this book presents techniques in the application of formal methods to object based distributed systems A major theme of the book is how to formally handle the requirements arising from OO distributed systems such as dynamic reconfiguration encapsulation subtyping inheritance and real time aspects These may be supported either by enhancing existing notations such as UML LOTOS SDL and Z or by defining fresh notations such as Actors Pi calculus and Ambients The major specification notations and modelling techniques are introduced and compared by leading researchers The book also includes a description of approaches to the specification of non functional requirements and a discussion of security issues Researchers and practitioners in software design object oriented computing distributed systems and telecommunications systems will gain an appreciation of the relationships between the major areas of concerns and learn how the use of object oriented based formal methods provides workable solutions

Distributed

Applications and Interoperable Systems II Lea Kutvonen, Hartmut König, Martti Tienari, 2013-03-09 Mastering interoperability in a computing environment consisting of different operating systems and hardware architectures is a key requirement which faces system engineers building distributed information systems. Distributed applications are a necessity in most central application sectors of the contemporary computerized society for instance in office automation, banking, manufacturing, telecommunication and transportation. This book focuses on the techniques available or under development with the goal of easing the burden of constructing reliable and maintainable interoperable information systems. The topics covered in this book include Management of distributed systems, Frameworks and construction tools, Open architectures and interoperability techniques, Experience with platforms like CORBA and RMI, Language interoperability e.g. Java, Agents and mobility, Quality of service and fault tolerance, Workflow and object modelling issues and Electronic commerce. The book contains the proceedings of the International Working Conference on Distributed Applications and Interoperable Systems II DAIS 99 which was held June 28-July 1 1999 in Helsinki, Finland. It was sponsored by the International Federation of Information Processing (IFIP). The conference program presents the state of the art in research concerning distributed and interoperable systems. This is a topical research area where much activity is currently in progress. Interesting new aspects and innovative contributions are still arising regularly. The DAIS series of conferences is one of the main international forums where these important findings are reported.

Open Distributed Processing Jan de Meer, Volker Heymer, Rudolf Roth, 1992. Open Distributed Processing is a central field in the standardization activities of ISO and CCITT. This volume presents important cornerstones related to ODP: an introduction to the ISO Basic Reference Model providing the framework for future standards in the area of ODP; the architectural implications of ODP; the methods and techniques to model information needs in enterprises; a report on the CCITT studies on Intelligent Networks for new telecommunication services; a report on the Telecommunication Information Networking Architecture Initiative for the synergy between computing and telecommunication; and the fundamental concepts for object oriented design based on formal descriptions.

Abstract

Machine Models for Parallel and Distributed Computing M. Kara, J. R. Davy, D. Goodeve, 1996. Abstract Machine Models have played a profound though frequently unacknowledged role in the development of modern computing systems. They provide a precise definition of vital concepts, allow system complexity to be managed by providing appropriate views of the activity under consideration, enable reasoning about the correctness and quantitative performance of proposed problem solutions and encourage communication through a common medium of expression. Abstract Models in Parallel and Distributed computing have a particularly important role in the development of contemporary systems encapsulating and controlling an inherently high degree of complexity. The Parallel and Distributed computing communities have traditionally considered themselves to be separate. However, there is a significant contemporary interest in both of these communities in a common hardware model: a set of workstation class machines connected by a high performance network. The traditional

Parallel Distributed distinction therefore appears under threat **Open Distributed Processing** K. Raymond,L. Armstrong,2013-06-05 Open Distributed Processing contains the selected proceedings of the Third International Conference on Open Distributed Systems organized by the International Federation for Information Processing and held in Brisbane Australia in February 1995 The book deals with the interconnectivity problems that advanced computer networking raises providing those working in the area with the most recent research including security and management issues
