## **Operations Management A Supply Chain Approach:**

*Operations Management* Derek L. Waller, 2003-01-01 Operations Management is the effective planning organization and control of the resources and activities needed to provide customers with goods and services. This encompasses a broad range of functions including the provision of raw materials, manufacturing, assembly and distribution of finished goods to the client. With the increasing use of subcontractors in disparate locations for many business functions and the continual drive for shorter lead times, this supply chain network is a critical factor in business success. Derek Waller's new approach to operations management treats operations and the supply chain as an integrated system, highlighting the links between the supply chain and all other parts of the business in both the manufacturing and service sectors. To reflect this, he gives more prominence to key topics such as inventory control, quality planning and forecasting than many competitive books. A comprehensive and practical text, the first edition has been praised for its fresh approach, lively writing style, use of examples and international emphasis. The current book takes a fully student centred approach, complete with chapter introductions, summaries, boxed examples, questions, exercises and cases. As befits a modern text in operations management, Waller balances the coverage of manufacturing and service sectors and includes up to date technological topics. The new edition will be rewritten throughout to incorporate the latest technological advances and business thinking. In addition, the supply chain approach will be more clearly highlighted, along with links to strategy, to provide a more coherent conceptual framework.

management is an area of management concerned with overseeing designing and controlling the process of production and redesigning business operations in the production of goods or services It involves the responsibility of ensuring that business operations are efficient in terms of using as few resources as needed and effective in terms of meeting customer requirements It is concerned with managing the process that converts inputs in the forms of raw materials labor and energy

into outputs in the form of goods and or services The relationship of operations management to senior management in commercial contexts can be compared to the relationship of line officers to highest level senior officers in military science The highest level officers shape the strategy and revise it over time while the line officers make tactical decisions in support of carrying out the strategy In business as in military affairs the boundaries between levels are not always distinct tactical information dynamically informs strategy and individual people often move between roles over time
