Operations Research Proceedings 1998:

Operations Research Proceedings 1998 Peter Kall, Hans-Jakob Lüthi, 2013-03-07 This proceedings volume contains a selection of papers presented at the OR 98 conference that was held at the Swiss Federal Institute of Technology ETH in Zurich from August 31 September 3 1998 The selection of papers included in this volume reflects well the number of papers in the corresponding sections at the conference Thus we observe that the intellectual mainstream in Operations Research still is mathematical optimization and its application in logistics and transportation systems In addition to these traditional areas the conference emphasized the potential contributions of Operations Research in the new challenging area of system design and management in the liberalized energy and telecommunication markets

[Computational Logistics](#) Jürgen W. Böse, Hao Hu, Carlos Jahn, Xiaoning Shi, Robert Stahlbock, Stefan Voß, 2011-09-25 This book constitutes the refereed proceedings of the Second International Conference on Computational Logistics ICCL 2011 held in Hamburg Germany in September 2011 The 26 revised full papers presented were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on transport services logistics systems and production and maritime shipping and container terminals

[Optimization Software Class Libraries](#) Stefan Voß, David L. Woodruff, 2005-12-17 Optimization problems in practice are diverse and evolve over time giving rise to requirements both for ready to use optimization software packages and for optimization software libraries which provide more or less adaptable building blocks for application specific software systems In order to apply optimization methods to a new type of problem corresponding models and algorithms have to be coded so that they are accessible to a computer One way to achieve this step is the use of a modeling language Such modeling systems provide an excellent interface between models and solvers but only for a limited range of model types in some cases for example linear due in part to limitations imposed by the solvers Furthermore while modeling systems especially for heuristic search are an active research topic it is still an open question as to whether such an approach may be generally successful Modeling languages treat the solvers as a black box with numerous controls Due to variations for example with respect to the pursued objective or specific problem properties dressing real world problems often requires special purpose methods Thus we are faced with the difficulty of efficiently adapting and applying appropriate methods to these problems Optimization software libraries are intended to make it relatively easy and cost effective to incorporate advanced planning methods in application specific software systems A general classification provides a distinction between callable packages numerical libraries and component libraries

[Multiparty and Linked Contracts, Transport Logistics and the Uniform Transport Law](#) Marta K. Kołacz, 2024-12-11 This book introduces legal aspects of business networks in logistics with the example of shippers cooperation in cargo bundling which is the practice of manufacturing and distributing companies shippers consolidating cargo before the engagement of a carrier Shippers agree to cooperate and to detect cargo matching opportunities before shipment

As a result shippers can organize joint transportation yielding significant efficiency gains in both logistics and sustainability terms. However the current legal framework is not adapted to co operation in cargo bundling. This book not only clarifies the operation of laws with the special focus on international uniform transport laws but also provides legal solutions facilitating legal certainty in co operation. It is the first comprehensive book on the legal aspects of shippers co operation in logistics particularly liability issues in multiparty contracts, network contracts and long term contracts in the international carriage of goods domain. It is also the first providing an interpretative framework for transport conventions considering new business models and new technologies. Proposals are made for solutions at regulatory levels but also for contracts which are especially important because contractual solutions can facilitate shippers to enter co operation and help transport orchestrators operating through online platforms to prepare standard terms and conditions. The comparative part of the text features three jurisdictions Poland, Germany and England which offer readers an insight into how multiparty context in the carriage of goods operates at the crossroads of national laws and international transport conventions. This book is written for interested legal practitioners, policymakers, lobbying bodies, industry professionals, logistics management of selling and producing companies and scholars. It will also broadly appeal to those dealing with sustainable logistics and concepts such as sharing economy in logistics.

Models, Methods and Decision Support for Management

Peter Kischka, Ulrike Leopold-Wildburger, Rolf H. Möhring, Franz-Josef Radermacher, 2012-12-06. This title represents an ambitious undertaking, namely a broad view on the nature of intelligent decision making which is characterized by the use of models and methods in the framework of decision support for management. With this title we want to reflect the scope of our field but at the same time honor our colleague Prof. Paul Stahly on the occasion of his 65 birthday. Paul Stahly has over decades invested his energy in developing the area of Operations Research from such a broad point of view. He has done this not only at his chairs at the HSG University of St Gallen and the University of Linz but also on a broad international level as editor of *ITOR* and as influential member of all the Operations Research societies in the German speaking countries. He has in particular enriched our area by application oriented research and industrial projects in fields such as logistics, emergency planning, manning and others and he was pivotal in strengthening the cooperation between the national and international OR societies, particularly in the German speaking area. VI. Consequently many colleagues who partly cooperated very closely with him have contributed to this monograph. Some of these contributions have been presented at a colloquium in January 2001 in St Gallen in honor of Paul Stahly. This colloquium was attended by many colleagues coming from Germany, Austria, Switzerland, Italy and even from the United States.

Vehicle Routing under Consideration of Driving and Working Hours

Manuel Meyer, 2011-04-21. In this study the dispatchers problem of combined vehicle routing and break scheduling is modelled and solved using an efficient heuristic solution algorithm. Strategies for including the legal rules in the dispatching process are suggested.
