Optical Network Theory:

Optical Network Theory Yitzhak Weissman, 1992 This reference blends the concepts of optics and microwave theory. It is logically organized in two main parts: the first section deals with network analysis while the second concentrates on signal analysis. As a whole, the text focuses on the fundamental aspects of optical networks. Methodology rather than analysis is the focus of the book. The discussion provides the tools you need to perform your own in-depth analysis of optical networks.

Multichannel Optical Networks: Theory and Practice Peng-Jun Wan, Dingzhu Du, Panos M. Pardalos, 1998 A response to the exhaustion of fiber optic cable network capacity for digital telecommunication and the resulting shift from time division multiplexing (TDM) to wavelength division multiplexing (WDM) to add capacity and the rapid sales of the new technology. Theorists and practitioners in computer science present 17 papers applying theoretical and algorithmic results to such practical problems as admissions control, routing and channel assignments, multicasting and protection, and fault tolerance. No index. Annotation copyrighted by Book News Inc Portland OR. Multichannel Optical Networks Peng-Jun Wan, 2000-09-30. The huge bandwidth of optical fiber was recognized back in the 1970s during the early development of fiber optics technology. For the last two decades, the capacity of experimental and deployed systems has been increasing at a rate of 100 fold each decade, a rate exceeding the increase of integrated circuit speeds. Today, optical communication in the public communication networks has developed from the status of a curiosity into being the dominant technology. Various great challenges arising from the deployment of wavelength division multiplexing (WDM) have attracted much effort from many researchers. Indeed, optical networking has been a fertile ground for both theoretical research and experimental studies. This monograph presents contributions from the author's past and ongoing research in the field of optical networking. The ideas presented focus more on graph theoretical and algorithmic aspects of optical networks. Although this book is limited to the author's own research, there are many outstanding achievements made by other individuals which are cited throughout. Without the inspiration of their efforts, this monograph would never have been possible. Audience: Research workers and professionals from mathematics, computer science and engineering with an interest in algorithms, graph theory, telecommunications, networking and optical devices.

field that amongst a host of other benefits enables engineers to implement new functions in microwave systems. With contributions from leading experts *Microwave Photonics Devices and Applications* explores this rapidly developing discipline. It bridges a gap between microwave and photonic engineering providing an accessible interpretation of the current available research material and a detailed introduction to various aspects of the area. Opening with an overview to the subject this book covers direct modulation photonic oscillators for THz signal generation and terahertz sources. It takes a unique application focused approach and describes analogue fibre optic links, fibre radio technology, microwave photonic signal processing, measurement of microwave photonic components and biomedical applications. This text is ideal for practising microwave and fibre optics communication engineers wishing to improve their knowledge and for researchers and graduate students wanting an overview of the subject.

Multiple Access Communication Networks Hongxi Yin, David J. Richardson, 2009-03-15 *Optical code division multiple access OCDMA communication network technology* will play an important role in future optical networks such as optical access and metropolitan area networks. OCDMA technology can also be applied to implement optical signal multiplexing and label switching on backbone networks. *Optical Code Division Multiple Access Communication Networks Theory and Applications* introduces the code theory of OCDMA, the methods and technologies of OCDMA encoding and decoding, the theory and methods of analyzing OCDMA systems with various receiver models and realizing multiple class services with different bit rates and QoS. In addition, OCDMA network architectures, protocols and applications are discussed in detail. The up to date theoretical and experimental results on OCDMA systems and networks are also reported. A large number of encoding/decoding examples and many analysis and simulation results of code and system performances are given. It is a valuable text and/or reference book for postgraduates majoring in telecommunication and photonics to obtain a well knit theoretical foundation and for engineers in R&D and management of optical communications. Dr. Yin is an Associate Professor of the School of Electronics Engineering and Computer Science at Peking University, China, and was a Visiting Research Fellow of Optoelectronics Research Centre (ORC) at University of Southampton, UK. Dr. Richardson is a Professor for optical communications and Deputy Director of ORC at University of Southampton, UK, and is responsible for much of the ORC's fiber related activities.
