**Generation Intelligent Optical Networks** Stamatis Kartalopoulos,2007-11-24 Optical networks have been in commercial deployment since the early 1980s as a result of advances in optical photonic and material technologies Although the initial deployment was based on silica ber with a single wavelength modulated at low data rates it was quickly demonstrated that ber can deliver much more bandwidth than any other transmission medium twisted pair wire coaxial cable or wireless Since then the optical network evolved to include more exciting technologies gratings optical lters optical multiplexers and optical amplifiers so that today a single ber can transport an unprecedented aggregate data rate that exceeds Tbps and this is not the upper limit yet Thus the ber optic network has been the network of choice and it is expected to remain so for many generations to come for both synchronous and asynchronous payloads voice data video interactive video games music text and more In the last few years we have also witnessed an increase in network attacks as a result of store and forward computer based nodes These attacks have many malicious objectives harvest someone else's data impersonate another user cause denial of service destroy files and more As a result a new field in communication is becoming important communication networks and information security In fact the network architect and system designer is currently challenged to include enhanced features such as intruder detection service restoration and countermeasures intruder avoidance and so on In all the next generation optical network is intelligent and able to detect and outsmart malicious intruders

### **Optical Networks** Debasish

Datta,2022-03-01 Following the emergence of lasers and optical fibers optical networking made its beginning in the 1970s with high speed LANs MANs In the 1980s when the bandwidth of intercity microwave links turned out to be inadequate for digital telephony the technology for single wavelength optical communications using SONET SDH arrived as a saviour to replace the microwave links However single wavelength links couldn't utilize the huge bandwidth 40 THz of optical fibers while the bandwidth demands kept soaring This necessitated the use of wavelength division multiplexing WDM for concurrent transmission over multiple wavelengths increasing the available bandwidth significantly Today optical networking has become an indispensable part of telecommunication networks at all hierarchical levels The book Optical Networks provides a graduate level presentation of optical networks capturing the past present and ensuing developments with a unique blend of breadth and depth The book is organized in four parts and three appendices Part I presents an overview and the enabling technologies in two chapters Part II presents the single wavelength optical networks in three chapters while Part III deals with the various forms of WDM optical networks in four chapters Finally Part IV presents some selected topics in six chapters dealing with a number of contemporary and emerging topics Optical Networks provides a comprehensive all in one text for beginning graduate as well as final year undergraduate students and also allows R D engineers to quickly refresh the basics and then move on to emerging topics
