## **Open Problems In Communication And Computation:**

Open Problems in Communication and Computation Thomas M. Cover, B. Gopinath, 2012-12-06 Thomas M Cover and B Gopinath The papers in this volume are the contributions to a special workshop on problems in communication and computation conducted in the summers of 1984 and 1985 in Morristown New Jersey and the summer of 1986 in Palo Alto California The structure of this workshop was unique no recent results no surveys Instead we asked for outstanding open problems in the field There are many famous open problems including the question P NP the simplex conjecture in communication theory the capacity region of the broadcast channel and the two helper problem in information theory Beyond these well defined problems are certain grand research goals What is the general theory of information flow in stochastic networks What is a comprehensive theory of computational complexity What about a unification of algorithmic complexity and computational complexity Is there a notion of energy free computation And if so where do information theory communication theory computer science and physics meet at the atomic level Is there a duality between computation and communication Finally what is the ultimate impact of algorithmic complexity on probability theory And what is its relationship to information theory The idea was to present problems on the first day try to solve them on the second day and present the solutions on the third day In actual fact only one problem was solved during the meeting El Gamal's problem on noisy communication over a common line *Results and Trends in Theoretical Computer Science* Juliani

Karhumäki, Hermann Maurer, 1994-05-26 This volume is dedicated to Professor Arto Salomaa on the occasion of his 60th birthday The 32 invited papers contained in the volume were presented at the festive colloquium organized by Hermann Maurer at Graz Austria in June 1994 the contributing authors are well known scientists with special relations to Professor Salomaa as friends Ph D students or co authors The volume reflects the broad spectrum of Professor Salomaa's research interests in theoretical computer science and mathematics with contributions particularly to automata theory formal language theory mathematical logic computability and cryptography The appendix presents Professor Salomaa's curriculum vitae and lists the more than 300 papers and 9 books he published Information, Randomness & Incompleteness Gregory J. Chaitin, 1987 The papers gathered in this book were published over a period of more than twenty years in widely scattered journals They led to the discovery of randomness in arithmetic which was presented in the recently published monograph on Algorithmic Information Theory by the author There the strongest possible version of Gödel's incompleteness theorem using an information theoretic approach based on the size of computer programs was discussed The present book is intended as a companion volume to the monograph and it will serve as a stimulus for work on complexity randomness and unpredictability in physics and biology as well as in metamathematics Theory and Applications of Models of Computation Jin-Yi Cai, Barry
