trials and trials involving small numbers of patients as well as reports of single cases mindful that such an approach has its limitations Opportunistic Infections Treatment and Prophylaxis is organized into four major parts bacterial viral parasitic and fungal diseases affecting the immunocompromised population Each part surveys individual infections caused not only by well known etiologic agents but also by new and emerging species often taxonomically closely related to a major disease producing microorganism and until recently not considered to be human pathogens *Candida spp* and nontuberculous mycobacteria for example For the sake of uniformity within each part the species have been arranged according to their taxonomic characteristics
