Optical Communications Systems:

Optical Communications Jürgen Franz, Virander K. Jain, 2000 The advantages of optical communications are many ultra high speed highly reliable information transmission and cost effective modulation and transmission links to name but a few It is no surprise that optical fiber communications systems are now in extensive use all over the world Along with software and microelectronics optical communication represents a key technology of modern telecommunication systems Optical Communications Components and Systems provides the basic material required for advanced study in theory and applications of optical fiber and space communication systems After a review of some fundamental background material component based chapters discuss all relevant passive and active optical and optoelectronic components used in point to point links and in networks Systems chapters address the analysis and optimization of both incoherent and coherent systems introduce fiber optic link design and discuss physical limits The authors also provide an overview of applications such as optical networks and optical free space communications The advanced interactive multimedia communications of today and the future rely on optical fiber and space communication techniques Optical Communications Components and Systems offers engineers and physicists a working reference for the selection and design of optical communication systems and provides engineering students with a valuable text that prepares them for work in this essential and rapidly growing field

Optical Communications Systems Brian Ismay, 2016-09-01 Optical communication also known as optical telecommunication is communication at a distance using light to carry information It can be performed visually or by using electronic devices Optical communications systems are very important for all types of telecommunications and networks They consist of a transmitter that encodes a message into an optical signal a channel that carries the signal to its destination and a receiver that reproduces the message from the received optical signal Indeed the worldwide telephone network the worlds largest communications system is fiber optic based Further optics is finding progressively more communications applications by the day not to speak of the numerous sensing applications that are presently being implemented In some areas optics is being implemented somewhat more slowly than originally predicted This is in great part due to cost In the telephone network hardware cost was really not an issue compared to a myriad of other costs such as right of way and cable installation and the initial implementations were carried rapidly rather than costeffectively The telecommunications solutions which were the first to be carried out could therefore not be taken over directly into other applications Now though the telecommunications market is competitive as are the data communications market and others and various new cost effective solutions are appearing There are numerous applications where optics is
