**The Extraterrestrial Life Debate, Antiquity to 1915** Michael J. Crowe, 2008 This book presents key documents from the pre 1915 history of the extraterrestrial life debate Introductions and commentaries accompany each source document some of which are published here for the first time or in a new translation Authors included are Aristotle Lucretius Aquinas Nicholas of Cusa Galileo Kepler Pascal Fontenelle Huygens Newton Pope Voltaire Kant Paine Chalmers Darwin Wallace Dostoevski Lowell and Antoniadi among others Michael J Crowe has compiled an extensive bibliography not available in other sources These materials reveal that the extraterrestrial life debate rather than being a relatively modern phenomenon has extended throughout nearly all Western history and has involved many of its leading intellectuals The readings also demonstrate that belief in extraterrestrial life has had major effects on science and society and that metaphysical and religious views have permeated the debate throughout much of its history This is a valuable book that is not available anywhere else Crowe's purpose is to let the reader see the original words of the authors who discussed other worlds Crowe puts these documents in context by his substantial introduction and commentary Such a source book serves an important purpose and is ideal for teaching and generating discussion in class The subject is of increasing importance as we find more and more about the possibilities of extraterrestrial life through current disciplines such as astrobiology bioastronomy and the Search for Extraterrestrial Intelligence Steven J Dick Director NASA History Division NASA Having established himself as the world's authority on the history of the debates about extraterrestrial life in the eighteenth and nineteenth centuries Michael Crowe is perfectly positioned to produce this source book The introductory commentaries on the excerpts from primary sources he has

*Constructing America at the Peripheries* James A. Spiller, 1999

*Morphology of the Rocky Members of the Solar System* Elazar Uchupi, Kenneth O. Emery, 1993-12-16 These words are written on the 500th anniversary of Columbus' discovery of the New World Surely the deep space exploration of other worlds in our Solar System over the past few decades is an event of similar magnitude Man has traveled far enough to see Spaceship Earth suspended alone in black space And he has voyaged even farther to marvel at the crescent Earth rising over the Moon's cratered terrain Instrumented spacecraft have toured the entire Solar System even beyond the ninth planet Pluto This work of science Morphology of the Rocky Members of the Solar System is an inquiry about our extended home As with the Darwinian and Copernican paradigms the nature of our planetary system as the extended world around us has great significance for those who ponder the human condition The deep space views of our Planet Ocean with its sweeping clouds and moving oceans and creeping continents must rank as the greatest photograph ever taken Viewing Spaceship Earth hanging in the vast void is an almost frightening experience We are so alone It is easy to understand why so many are attracted to a simpler account of origins like the allegorical tale of creation written in heroic style but eschewing math maps figures tables references and evidence in the first eleven chapters of Genesis This treatise examines the morphology of the six rocky planets and their 27 satellites from a broad perspective

The Wrong Stuff Karl Grossman, 1997 Details NASA's mishaps with plutonium fueled missions and its unrealistic calculations about the probability of a major accident and offers a solar alternative that would make missions safe
