Microwave Passive Direction Finding:

Microwave Passive Direction Finding Stephen E. Lipsky, 2004 Microwave Passive Direction Finding unifies direction finding DF theory and brings together into a single source wide ranging information on the technology of measuring the direction of arrival of microwave signals Throughout the material there is authoritative information useful to preparing a detailed technical proposal for new business that has been compiled from many years of defense industry presentations reports and systems development Diagrams and photographs of state of the art equipment depict the methods discussed and equations and charts facilitate a hands on approach to calculating system performance The book also presents rarely published systems concepts such as digital preprocessing supercommutation and wide RF bandwidth signal detection methods Specific sections cover evolution and use of monopulse passive DF receiver theory design of antenna elements for conformal DF coverage receiver configurations DF antenna arrays interferometer DF techniques computation methods for signal detection probability of detection accuracy of DF systems and signal processing and display methods More than any book on this technology Microwave Passive Direction Finding anticipates the questions that arise in the DF design process The chapters are organized to stand alone making the book useful as a text reference for the practicing engineer At the same time the material is organized inductively so that it can be used for a college or seminar text *Human Ears Inspired*

Passive Microwave Direction Finding, 2009 We have investigated biological inspired RF direction finding techniques with the goal to learn and utilize the amazing acoustic direction finding capabilities of human and achieve compact high performance and low cost RF direction finding devices Our initial simulation and experimental results are very encouraging Through the 9 month STIR program Human Ears Inspired Microwave Passive Direction Finding prototype direction finding systems including antennas human head like low pass scatter and digital receiver have been successfully designed and built Several biological inspired hardware configurations i e head like scatters of various properties omni directional antennas and preliminary algorithms have been theoretically and experimentally tested The effectiveness of the novel human head like scatter has been clearly demonstrated In addition we have performed initial investigation of single antenna direction finding for broadband RF signals The most important goal of the STIR program which is to develop an experimental test bed so that it can be used in the near future to study and develop novel RF direction finding techniques inspired by the amazing human auditory system has been achieved **Electronic Warfare Receivers and Receiving Systems** Richard A.

Poisel, 2015-06-01 Receivers systems are considered the core of electronic warfare EW intercept systems Without them the fundamental purpose of such systems is null and void This book considers the major elements that make up receiver systems and the receivers that go in them This resource provides system design engineers with techniques for design and development of EW receivers for modern modulations spread spectrum in addition to receivers for older common modulation formats Each major module in these receivers is considered in detail Design information is included as well as performance

tradeoffs of various components Major factors that influence the functioning of the modules are identified and discussed Key performance parameters are identified as well and approaches to achieving design goals are considered
