Open Distributed Processing K. Raymond, L. Armstrong, 2013-06-05 Open Distributed Processing contains the selected proceedings of the Third International Conference on Open Distributed Systems organized by the International Federation for Information Processing and held in Brisbane Australia in February 1995 The book deals with the interconnectivity problems that advanced computer networking raises providing those working in the area with the most recent research including security and management issues Open Distributed Processing and Distributed Platforms Jerome Rolia, Jacob

Slonim, John Botsford, 2016-01-09 Advances in computer networking have allowed computer systems across the world to be interconnected Open Distributed Processing ODP systems are those that support heterogeneous distributed applications both within and between autonomous organizations Many challenges must be overcome before ODP systems can be fully realized This book describes the recent advances in the theory and practice of developing deploying and managing open distributed systems Applications of these systems include but are not limited to telecommunication medical and large scale transaction processing and electronic commerce systems All of these are currently developed on distributed platforms For anybody working in industry or research in this field Open Distributed Processing and Distributed Platforms will prove an invaluable text

Open Distributed Systems Reinhard Gotzhein, 2013-03-09 *Open Distributed Systems* Jon Crowcroft, 1996 The key area of open communications in distributed computing systems is explained in this authoritative text International standards and management strategies are explained in the context of both global and local network developments

Formal Methods for Open Object-based Distributed Systems Elie Najm, Jean-Bernard Stefani, 1997 Object based Distributed Computing is being established as the most pertinent basis for the support of large heterogeneous computing and telecommunications systems The advent of Open Object based Distributed Systems OODS brings new challenges and opportunities for the use and development of formal methods Formal Methods for Open Object based Distributed Systems presents the latest research in several related fields and the exchange of ideas and experiences in a number of topics including formal models for object based distributed computing semantics of object based distributed systems and programming languages formal techniques in object based and object oriented specification analysis and design refinement and transformation of specifications multiple viewpoint modeling and consistency between different models formal techniques in distributed systems verification and testing types service types and subtyping specification verification and testing of quality of service constraints and formal methods and the object life cycle It contains the selected proceedings of the International Workshop on Formal Methods for Open Object based Distributed Systems sponsored by the International Federation for Information Processing and based in Paris France in March 1996 **Middleware'98** Nigel Davies, Kerry Raymond, Jochen Seitz, 2012-12-06 Welcome to Middleware 98 and to one of England's most beautiful regions In recent years the distributed systems community has witnessed a growth in the number of conferences leading to difficulties in tracking

the literature and a consequent loss of awareness of work done by others in this important field The aim of Middleware 98 is to synthesise many of the smaller workshops and conferences in this area bringing together research communities which were becoming fragmented The conference has been designed to maximise the experience for attendees This is reflected in the choice of a resort venue rather than a big city to ensure a strong focus on interaction with other distributed systems researchers The programme format incorporates a question and answer panel in each session enabling significant issues to be discussed in the context of related papers and presentations The invited speakers and tutorials are intended to not only inform the attendees but also to stimulate discussion and debate

The Reference Model of Open Distributed Processing RM ODP is an international standard that provides a solid basis for describing and building widely distributed systems and applications in a systematic way It stresses the need to build these systems with evolution in mind by identifying the concerns of major stakeholders and then expressing the

Trust and

Fairness in Open, Distributed Systems Adam Wierzbicki,2010-05-26 This book is an attempt to bring closer the greater vision of the development of Social Informatics Social Informatics can be defined as a discipline of informatics that studies

how information systems can realize social goals use social concepts or become sources of information about social phenomena All of these research directions are present in this book fairness is a social goal trust is a social concept and much of this book bases on the study of traces of Internet auctions used also to drive social simulations that are a rich source of information about social phenomena The book has been written for an audience of graduate students working in the area of informatics and the social sciences in an attempt to bridge the gap between the two disciplines Because of this the book avoids the use of excessive mathematical formalism especially in Chapter 2 that attempts to summarize the theoretical basis of the two disciplines of trust and fairness management Readers are usually directed to quoted literature for the purpose of studying mathematical proofs of the cited theorems

Testing of Communicating Systems Gyula Csopaki,Margit Dibuz,Katalin Tarnay,2013-03-14

Testing of Communicating Systems presents the latest worldwide results in both the theory and practice of the testing of

communicating systems This volume provides a forum that brings together the substantial volume of research on the testing of communicating systems ranging from conference testing through interoperability testing to performance and QoS testing The following topics are discussed in detail Types of testing Phases of the testing process Classes of systems to be tested and Theory and practice of testing LIST This book contains the selected proceedings of the 12th International Workshop on the Testing of Communicating Systems formerly the International Workshop on Protocol Test Systems sponsored by the International Federation for Information Processing IFIP and held in Budapest Hungary in September 1999 The book contains not only interesting research on testing different communication technologies from telecom and datacom systems to distributed systems but also presents reports on the application of these results in industry Testing of Communicating Systems will be essential reading for engineers IT managers and research personnel working in computer science and telecommunications

Testing of Communicating Systems Bernd Baumgarten, Heinz-Jürgen Burkhardt, Alfred Giessler, 2013-06-05 This volume contains the proceedings of the IFIP WG 6.1 International Workshop on Testing of Communicating Systems IWTCS 96 held in Darmstadt Germany on September 9 through 12 1996 continuing the IFIP WG 6.1 series of International Workshops on Protocol Test Systems IWPTS In this series of working conferences held annually since 1988 many valuable contributions have been presented with an emphasis both on the OSI conformance testing methodology and framework as well as the standardization effort on formal methods in conformance testing While there are still open issues and divergencies between theory and practice in these fields the scope of the series started expanding to related fields of growing practical relevance for example to testing with regard to the B-ISDN protocol reference model in particular ATM the ODP reference model and the Internet protocol suite as well as to interoperability testing and performance testing To reflect the extended scope the program committee agreed on a new name for this series of working conferences to be applied the first time to the 1996 conference However in order to emphasize the tradition of IWPTS the numbering of this series was continued such that IWTCS 96 is counted as the 9th International Workshop on Testing of Communicating Systems As in the years before the workshop aims at bringing together researchers and practitioners furthering the exchange of views and correlating the work of both sides

On the design of open distributed systems Reinhard Gotzhein, 1991 Ambient Intelligence Emile H.L. Aarts, James L. Crowley, Heinz Gerhäuser, Alexander Pflaum, Janina Schmidt, Reiner Wichert, 2008-11-13 This volume contains the proceedings of the Second European Ambient Intelligence AmI Conference The conference took place in Erlangen and Nürnberg November 19-22 2008 The concept of ambient intelligence AmI was introduced in the late 1990s as a novel paradigm for electronic environments for the years 2010-2020 It builds on the early visions of Weiser describing a novel mobile computing infrastructure integrated into the networked environment of people According to early definitions AmI refers to smart electronic surroundings that are sensitive and responsive to the presence of people The added value for the multi-dimensional society we are living in lies in the fact that the large-scale integration of

microelectronics into the environment enables people and objects to interact with this environment in a less trustworthy and natural manner Obviously AmI solutions deliver a new quality of communication and information exchange they help people to fulfill their professional tasks with increasing efficiency enable the older generation to stay much longer in the privacy of their own homes and the younger one to lead a healthy and responsible life Smart mobile devices navigate in private apartments as well as in complex public or industrial environments in order to support people with a broad variety of services
