Open Systems Interconnection Rainer W.G. Herbers,2012-12-06 Interoperability has been a requirement in NATO ever since the Alliance came into being an obvious requirement when 16 independent Nations agree to allocate national resources for the achievement of a common goal to maintain peace With the appearance of data processing in the command and control process of the armed forces the requirement for interoperability expanded into the data processing field Although problems of procedural and operational interoperability had been constantly resolved to some extent as they arose over the years the introduction of data processing increased the problems of technical interoperability The increase was partially due to the natural desire of nations to support their own national industries But it was definitely also due to the lack of time and resources needed to solve the problems During the mid and late 1970s the International Standards Organisation ISO decided to develop a concept model which would allow systems to intercommunicate The famous ISO 7 layer model for Open Systems Interconnection OSI was born The OSI model was adopted by NATO in 1983 as the basis for standardization of data communications in NATO The very successful first Symposium on Interoperability of ADP Systems held in November 1982 at the SHAPE Technical Centre STC gave an extensive overview of the work carried out on the lower layers of the model and revealed some intriguing ideas about the upper layers The first Symposium accurately reflected the state of the art at that point in time
