input voltage Two new common mode adapters for the input stage with a single differential pair are developed The first common mode adapter is based on a pseudo differential pair and the second one is based on current subtraction Three bipolar and two CMOS op amps with rail to rail input and output capability are designed The circuit simulation and chip test results are given in this dissertation There are many aspects of performance for op amps With different topologies op amps may have different performance One certain op amp may be good at some aspects but poor at others The General System Performance Theory is a systematic method for system performance analysis In order to get a single figure of merit the General System Performance Theory is applied to compare the overall performance of the designed three different bipolar rail to rail op amps
