## **Operative Surgery Vascular Surgery:**

*Rob & Smith's Operative Surgery: Concise Vascular Surgery* Crawford W. Jamieson, James S. T. Yao, 1998-09-04 The fifth edition of Rob's indications and technical analysis for each operation attention to potential pitfalls and risks summarized details of post operative complications. The chapters include detailed descriptions of the surgical exposure of blood vessels, the techniques of arterial suture and anastomosis, angiography and intraoperative angiography, and the intraoperative use of ultrasound. The main bulk of the book explores in detail the common specific vascular operations including carotid endarterectomy, aortoiliac endarterectomy, and bypass grafting. Femoropopliteal bypass, aneurysm resection, and the management of vascular injuries and amputations. The last section relates to the treatment of venous disease with particular emphasis on operations for varicose veins. It intentionally does not include those procedures routinely referred to specialist vascular centres, the focus instead being defined by the practice of general surgeons who may perform only a limited variety of vascular work and those operations which trainees on vascular surgery rotations can expect to encounter.

Designed as a portable resource the book provides typical dictations to guide the resident. Comprised of 226 procedures this new edition comprises the majority of procedures commonly performed by general and vascular surgeons. For each procedure a list of common indications is given. This list covers 95% of the situations in which a particular procedure will be used. A list of essential steps follows. These can be used to mentally rehearse the procedure before it is performed. The next heading Note these technical variations introduces a list that is intended to prompt the surgeon for particular things to note and dictate within the template. A list of possible complications that are typically associated with that particular surgical procedure follows. Finally a template operative dictation is provided. Common opening and terminating sequences for example how to enter and close the abdomen in all laparotomy dictations are included. The volume has two primary objectives. First it is designed to serve as a source of model operative dictations that may be individualized and used as templates. Second it is intended as an aide-memoir giving the surgeon a short list of pertinent information about each procedure. Ample space is provided to allow each surgeon to add notes. By reviewing this introductory material before scrubbing on a procedure the trainee surgeon will enter the operating room better prepared to participate actively and to learn as much as possible. At the end of training this book
