Krantz, 2006-11-14 This conference gathered together a small group of people with similar interests in the geometric function theory of several complex variables. While the speeches were of a specialized nature the papers in the proceedings are largely of a survey and speculative nature. The volume is intended to serve both students and researchers as an invitation to active new areas of research. The level of the writing has been intentionally set in such a way that the papers will be accessible to a broad audience      *Multivariable Operator Theory* Ernst Albrecht, Raúl Curto, Michael Hartz, Mihai Putinar, 2023-12-21 Over the course of his distinguished career J rg Eschmeier made a number of fundamental contributions to the development of operator theory and related topics. The chapters in this volume compiled in his memory are written by distinguished mathematicians and pay tribute to his many significant and lasting achievements      Universal Algebra and Lattice Theory Stephen D. Comer, 2006-12-08      *Invariant Theory* Sebastian S. Koh, 2006-11-15 This volume of expository papers is the outgrowth of a conference in combinatorics and invariant theory. In recent years newly developed techniques from algebraic geometry and combinatorics have been applied with great success to some of the outstanding problems of invariant theory, moving it back to the forefront of mathematical research once again. This collection of papers centers on constructive aspects of invariant theory and opens with an introduction to the subject by F Grosshans.
